

- (^{Fu}asinh *a*)
(^{Fu}acosh *a*) ▷ asinh *a*, acosh *a*, or atanh *a*, respectively.
(^{Fu}atanh *a*)
- (^{Fu}cis *a*) ▷ Return $e^{i a} = \cos a + i \sin a$.
- (^{Fu}conjugate *a*) ▷ Return complex conjugate of *a*.
- (^{Fu}max *num*⁺)
(^{Fu}min *num*⁺) ▷ Greatest or least, respectively, of *nums*.
- {
 {^{Fu}round|^{Fu}fround}
 {^{Fu}floor|^{Fu}ffloor}
 {^{Fu}ceiling|^{Fu}fceiling}
 {^{Fu}truncate|^{Fu}fftruncate}
} } *n* [*d*□]
- ▷ Return as integer or float, respectively, n/d rounded, or rounded towards $-\infty$, $+\infty$, or 0, respectively; and remainder.
- {
 ^{Fu}mod
 ^{Fu}rem
} *n* *d*
- ▷ Same as floor or truncate, respectively, but return remainder only.
- (^{Fu}random *limit* [*state*_{^{var}random-state}])
▷ Return non-negative random number less than *limit*, and of the same type.
- (^{Fu}make-random-state [{*state*|NIL|T|□□□])
▷ Copy of random-state object *state* or of the current random state; or a randomly initialized fresh random state.
- ^{var}*random-state* ▷ Current random state.
- (^{Fu}float-sign *num-a* [*num-b*□])
▷ num-b with the sign of *num-a*.
- (^{Fu}signum *n*)
▷ Number of magnitude 1 representing sign or phase of *n*.
- (^{Fu}numerator *rational*)
(^{Fu}denominator *rational*)
▷ Numerator or denominator, respectively, of *rational*'s canonical form.
- (^{Fu}realpart *number*)
(^{Fu}imagpart *number*)
▷ Real part or imaginary part, respectively, of *number*.
- (^{Fu}complex *real* [*imag*□]) ▷ Make a complex number.
- (^{Fu}phase *number*) ▷ Angle of *number*'s polar representation.
- (^{Fu}abs *n*) ▷ Return $|n|$.
- (^{Fu}rational *real*)
(^{Fu}rationalize *real*)
▷ Convert *real* to rational. Assume complete/limited accuracy for *real*.
- (^{Fu}float *real* [*prototype*_{single-float}])
▷ Convert *real* into float with type of *prototype*.

1.3 Logic Functions

Negative integers are used in two's complement representation.

- (^{boole}operation *int-a* *int-b*)
▷ Return value of bitwise logical *operation*. *operations* are
- ^{co}boole-1 ▷ int-a.
^{co}boole-2 ▷ int-b.
^{co}boole-c1 ▷ \neg int-a.
^{co}boole-c2 ▷ \neg int-b.
^{co}boole-set ▷ All bits set.
^{co}boole-clr ▷ All bits zero.

Typographic Conventions

name; ^{Fu}**name**; ^M**name**; ^{sO}**name**; ^{gF}**name**; ^{var}**name***; ^{co}**name**
 ▷ Symbol defined in Common Lisp; esp. function, macro, special operator, generic function, variable, constant.

- them* ▷ Placeholder for actual code.
- me* ▷ Literal text.
- [*foo*_{bar}]
 ▷ Either one *foo* or nothing; defaults to *bar*.
- foo**; {*foo*}*
 ▷ Zero or more *foos*.
- foo*⁺; {*foo*}⁺
 ▷ One or more *foos*.
- foos* ▷ English plural denotes a list argument.
- {*foo*|*bar*|*baz*}_; {*foo*
bar
baz}
 ▷ Either *foo*, or *bar*, or *baz*.
- {*foo*
bar
baz}
 ▷ Anything from none to each of *foo*, *bar*, and *baz*.
- foo*
 ▷ Argument *foo* is not evaluated.
- bar*
 ▷ Argument *bar* is possibly modified.
- foo*^R
 ▷ *foo** is evaluated as in **progn**; see p. 19.
- foo*₂; *bar*₂; *baz*₂
 ▷ Primary, secondary, and *n*th return value.
- T; NIL ▷ **t**, or truth in general; and **nil** or **()**.

1 Numbers

1.1 Predicates

(^{Fu}number+)
 (^{Fu}number+)
 ▷ **T** if all *numbers*, or none, respectively, are equal in value.

(^{Fu}> *number+*)
 (^{Fu}>= *number+*)
 (^{Fu}< *number+*)
 (^{Fu}<= *number+*)
 ▷ Return **T** if *numbers* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively.

(^{Fu}minusp *a*)
 (^{Fu}zerop *a*)
 (^{Fu}plusp *a*)
 ▷ **T** if *a* < 0, *a* = 0, or *a* > 0, respectively.

(^{Fu}evenp *integer*)
 (^{Fu}oddp *integer*)
 ▷ **T** if *integer* is even or odd, respectively.

(^{Fu}numberp *foo*)
 (^{Fu}realp *foo*)
 (^{Fu}rationalp *foo*)
 (^{Fu}floatp *foo*)
 (^{Fu}integerp *foo*)
 (^{Fu}complexp *foo*)
 (^{Fu}random-state-p *foo*)
 ▷ **T** if *foo* is of indicated type.

1.2 Numeric Functions

(^{Fu}+ *a*₁ *a*₂*)
 (^{Fu}* *a*₁ *a*₂*)
 ▷ Return $\sum a$ or $\prod a$, respectively.

(^{Fu}- *a* *b**)
 (^{Fu}/ *a* *b**)
 ▷ Return $a - \sum b$ or $a / \prod b$, respectively. Without any *bs*, return $-a$ or $1/a$, respectively.

(^{Fu}1+ *a*)
 (^{Fu}1- *a*)
 ▷ Return $a + 1$ or $a - 1$, respectively.

{^Mincf
^Mdecf} *place* [*delta*]_]
 ▷ Increment or decrement the value of *place* by *delta*. Return new value.

(^{Fu}exp *p*)
 (^{Fu}exp2 *b* *p*)
 ▷ Return e^p or b^p , respectively.

(^{Fu}log *a* [*b*])
 ▷ Return $\log_b a$ or, without *b*, $\ln a$.

(^{Fu}sqrt *n*)
 (^{Fu}isqrt *n*)
 ▷ \sqrt{n} in complex or natural numbers, respectively.

(^{Fu}lcm *integer**_])
 (^{Fu}gcd *integer**_])
 ▷ Least common multiple or greatest common denominator, respectively, of *integers*. (**gcd**) returns 0.

^{co}**pi** ▷ **long-float** approximation of π , Ludolph's number.

(^{Fu}sin *a*)
 (^{Fu}cos *a*)
 (^{Fu}tan *a*)
 ▷ $\sin a$, $\cos a$, or $\tan a$, respectively. (*a* in radians.)

(^{Fu}asin *a*)
 (^{Fu}acos *a*)
 ▷ $\arcsin a$ or $\arccos a$, respectively, in radians.

(^{Fu}atan *a* [*b*]_])
 ▷ $\arctan \frac{a}{b}$ in radians.

(^{Fu}sinh *a*)
 (^{Fu}cosh *a*)
 (^{Fu}tanh *a*)
 ▷ $\sinh a$, $\cosh a$, or $\tanh a$, respectively.

$\left\{ \begin{array}{l} \text{string-trim} \\ \text{string-left-trim} \\ \text{string-right-trim} \end{array} \right\}$ *char-bag string*)

▷ Return *string* with all characters in sequence *char-bag* removed from both ends, from the beginning, or from the end, respectively.

$\text{(char string } i)$
 $\text{(schar string } i)$

▷ Return zero-indexed *i*th character of string ignoring/obeying, respectively, fill pointer. **setfable**.

$\text{(parse-integer string } \left\{ \begin{array}{l} \text{:start } \text{start}_{\text{int}}$

$\text{:end } \text{end}_{\text{int}}$
 $\text{:radix } \text{int}_{\text{int}}$
 $\text{:junk-allowed } \text{bool}_{\text{int}}$ $\left. \right\}$)

▷ Return *integer* parsed from *string* and *index* of parse end.

4 Conses

4.1 Predicates

$\text{(cons } foo)$
 $\text{(list } foo)$ ▷ Return T if *foo* is of indicated type.

$\text{(endp } list)$
 $\text{(null } foo)$ ▷ Return T if *list/foo* is NIL.

$\text{(atom } foo)$ ▷ Return T if *foo* is not a **cons**.

$\text{(tailp } foo list)$ ▷ Return T if *foo* is a tail of *list*.

$\text{(member } foo list \left\{ \begin{array}{l} \text{:test } \text{function}_{\text{int}^* \text{=}} \\ \text{:test-not } \text{function} \\ \text{:key } \text{function} \end{array} \right\})$

▷ Return tail of *list* starting with its first element matching *foo*. Return NIL if there is no such element.

$\left\{ \begin{array}{l} \text{member-if} \\ \text{member-if-not} \end{array} \right\} \text{ test } list \text{ [:key function]}$

▷ Return tail of *list* starting with its first element satisfying *test*. Return NIL if there is no such element.

$\text{(subsetp } list-a \text{ list-b } \left\{ \begin{array}{l} \text{:test } \text{function}_{\text{int}^* \text{=}} \\ \text{:test-not } \text{function} \\ \text{:key } \text{function} \end{array} \right\})$

▷ Return T if *list-a* is a subset of *list-b*.

4.2 Lists

$\text{(cons } foo \text{ bar})$ ▷ Return new cons (*foo . bar*).

$\text{(list } foo^*)$ ▷ Return list of foos.

$\text{(list* } foo^+)$
▷ Return list of foos with last *foo* becoming cdr of last cons. Return *foo* if only one *foo* given.

$\text{(make-list } num \text{ [:initial-element } foo_{\text{int}}])$
▷ New list with *num* elements set to *foo*.

$\text{(list-length } list)$ ▷ Length of *list*; NIL for circular *list*.

$\text{(car } list)$ ▷ car of *list* or NIL if *list* is NIL. **setfable**.

$\text{(cdr } list)$
 $\text{(rest } list)$ ▷ cdr of *list* or NIL if *list* is NIL. **setfable**.

$\text{(nthcdr } n \text{ list})$ ▷ Return tail of *list* after calling **cdr** *n* times.

$\text{(first|second|third|fourth|fifth|sixth|...|ninth|tenth} \text{ list)}$
▷ Return nth element of *list* if any, or NIL otherwise. **setfable**.

$\text{(nth } n \text{ list)}$
▷ Return zero-indexed nth element of *list*. **setfable**.

boole-eqv ▷ $\text{int-}a \equiv \text{int-}b$.
 boole-and ▷ $\text{int-}a \wedge \text{int-}b$.
 boole-andc1 ▷ $\neg \text{int-}a \wedge \text{int-}b$.
 boole-andc2 ▷ $\text{int-}a \wedge \neg \text{int-}b$.
 boole-nand ▷ $\neg(\text{int-}a \wedge \text{int-}b)$.
 boole-ior ▷ $\text{int-}a \vee \text{int-}b$.
 boole-orc1 ▷ $\neg \text{int-}a \vee \text{int-}b$.
 boole-orc2 ▷ $\text{int-}a \vee \neg \text{int-}b$.
 boole-xor ▷ $\neg(\text{int-}a \equiv \text{int-}b)$.
 boole-nor ▷ $\neg(\text{int-}a \vee \text{int-}b)$.

$\text{(lognot } integer)$ ▷ $\neg integer$.

$\text{(logeqv } integer^*)$
 $\text{(logand } integer^*)$
▷ Return value of exclusive-nored or anded *integers*, respectively. Without any *integer*, return -1.

$\text{(logandc1 } int-a \text{ int-b})$ ▷ $\neg int-a \wedge int-b$.

$\text{(logandc2 } int-a \text{ int-b})$ ▷ $int-a \wedge \neg int-b$.

$\text{(lognand } int-a \text{ int-b})$ ▷ $\neg(int-a \wedge int-b)$.

$\text{(logxor } integer^*)$
 $\text{(logior } integer^*)$
▷ Return value of exclusive-ored or ored *integers*, respectively. Without any *integer*, return 0.

$\text{(logorc1 } int-a \text{ int-b})$ ▷ $\neg int-a \vee int-b$.

$\text{(logorc2 } int-a \text{ int-b})$ ▷ $int-a \vee \neg int-b$.

$\text{(lognor } int-a \text{ int-b})$ ▷ $\neg(int-a \vee int-b)$.

$\text{(logbitp } i \text{ integer})$
▷ T if zero-indexed *i*th bit of *integer* is set.

$\text{(logtest } int-a \text{ int-b})$
▷ Return T if there is any bit set in *int-a* which is set in *int-b* as well.

$\text{(logcount } int)$
▷ Number of 1 bits in *int* ≥ 0 , number of 0 bits in *int* < 0 .

1.4 Integer Functions

$\text{(integer-length } integer)$
▷ Number of bits necessary to represent *integer*.

$\text{(ldb-test } byte-spec \text{ integer})$
▷ Return T if any bit specified by *byte-spec* in *integer* is set.

$\text{(ash } integer \text{ count})$
▷ Return copy of *integer* arithmetically shifted left by *count* adding zeros at the right, or, for *count* < 0 , shifted right discarding bits.

$\text{(ldb } byte-spec \text{ integer})$
▷ Extract byte denoted by *byte-spec* from *integer*. **setfable**.

$\left\{ \begin{array}{l} \text{deposit-field} \\ \text{dpb} \end{array} \right\} \text{ int-}a \text{ byte-spec int-}b)$
▷ Return *int-b* with bits denoted by *byte-spec* replaced by corresponding bits of *int-a*, or by the low (**byte-size** *byte-spec*) bits of *int-a*, respectively.

$\text{(mask-field } byte-spec \text{ integer})$
▷ Return copy of *integer* with all bits unset but those denoted by *byte-spec*. **setfable**.

$\text{(byte } size \text{ position})$
▷ Byte specifier for a byte of *size* bits starting at a weight of 2^{position} .

$\text{(byte-size } byte-spec)$
 $\text{(byte-position } byte-spec)$
▷ Size or position, respectively, of *byte-spec*.

1.5 Implementation-Dependent

$\left. \begin{array}{l} \text{short-float} \\ \text{single-float} \\ \text{double-float} \\ \text{long-float} \end{array} \right\} \begin{array}{l} \text{epsilon} \\ \text{negative-epsilon} \end{array}$

▷ Smallest possible number making a difference when added or subtracted, respectively.

$\left. \begin{array}{l} \text{least-negative} \\ \text{least-negative-normalized} \\ \text{least-positive} \\ \text{least-positive-normalized} \end{array} \right\} \begin{array}{l} \text{short-float} \\ \text{single-float} \\ \text{double-float} \\ \text{long-float} \end{array}$

▷ Available numbers closest to -0 or $+0$, respectively.

$\left. \begin{array}{l} \text{most-negative} \\ \text{most-positive} \end{array} \right\} \begin{array}{l} \text{short-float} \\ \text{single-float} \\ \text{double-float} \\ \text{long-float} \\ \text{fixnum} \end{array}$

▷ Available numbers closest to $-\infty$ or $+\infty$, respectively.

$(\text{decode-float } n)$
 $(\text{integer-decode-float } n)$

▷ Return significand, exponent, and sign of float n .

$(\text{scale-float } n [i])$ ▷ With n 's radix b , return nb^i .

$(\text{float-radix } n)$
 $(\text{float-digits } n)$
 $(\text{float-precision } n)$

▷ Radix, number of digits in that radix, or precision in that radix, respectively, of float n .

$(\text{upgraded-complex-part-type } foo [environment_{NIL}])$

▷ Type of most specialized **complex** number able to hold parts of type foo .

2 Characters

$(\text{characterp } foo)$
 $(\text{standard-char-p } char)$ ▷ T if argument is of indicated type.

$(\text{graphic-char-p } character)$
 $(\text{alpha-char-p } character)$
 $(\text{alphanumericp } character)$

▷ T if $character$ is visible, alphabetic, or alphanumeric, respectively.

$(\text{upper-case-p } character)$
 $(\text{lower-case-p } character)$
 $(\text{both-case-p } character)$

▷ Return T if $character$ is uppercase, lowercase, or able to be in another case, respectively.

$(\text{digit-char-p } character [radix_{10}])$

▷ Return its weight if $character$ is a digit, or NIL otherwise.

$(\text{char=} character^+)$
 $(\text{char/=} character^+)$

▷ Return T if all $characters$, or none, respectively, are equal.

$(\text{char-equal } character^+)$
 $(\text{char-not-equal } character^+)$

▷ Return T if all $characters$, or none, respectively, are equal ignoring case.

$(\text{char}> character^+)$
 $(\text{char}>= character^+)$
 $(\text{char}< character^+)$
 $(\text{char}<= character^+)$

▷ Return T if $characters$ are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively.

$(\text{char-greaterp } character^+)$
 $(\text{char-not-lessp } character^+)$
 $(\text{char-lessp } character^+)$
 $(\text{char-not-greaterp } character^+)$

▷ Return T if $characters$ are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively, ignoring case.

$(\text{char-upcase } character)$
 $(\text{char-downcase } character)$

▷ Return corresponding uppercase/lowercase character, respectively.

$(\text{digit-char } i [radix_{10}])$ ▷ Character representing digit i .

$(\text{char-name } character)$

▷ Name of $character$ if there is one, or NIL.

$(\text{name-char } name)$

▷ Character with $name$ if there is one, or NIL.

$(\text{char-int } character)$
 $(\text{char-code } character)$

▷ Code of $character$.

$(\text{code-char } code)$

▷ Character with $code$.

char-code-limit ▷ Upper bound of $(\text{char-code } char)$; ≥ 96 .

$(\text{character } c)$ ▷ Return #\c.

3 Strings

Strings can as well be manipulated by array and sequence functions, see pages 10 and 12.

$(\text{stringp } foo)$

▷ T if foo is of indicated type.

$(\text{simple-string-p } foo)$

$\left\{ \begin{array}{l} \text{string=} \\ \text{string-equal} \end{array} \right\} foo \ bar \left\{ \begin{array}{l} \text{:start1 } start-foo_{0} \\ \text{:start2 } start-bar_{0} \\ \text{:end1 } end-foo_{NIL} \\ \text{:end2 } end-bar_{NIL} \end{array} \right\}$

▷ Return T if subsequences of foo and bar are equal. Obey/ignore, respectively, case.

$\left\{ \begin{array}{l} \text{string/=} \\ \text{string}> \\ \text{string}>= \\ \text{string}< \\ \text{string}<=} \end{array} \right\} foo \ bar \left\{ \begin{array}{l} \text{:start1 } start-foo_{0} \\ \text{:start2 } start-bar_{0} \\ \text{:end1 } end-foo_{NIL} \\ \text{:end2 } end-bar_{NIL} \end{array} \right\}$

▷ If foo is lexicographically not equal, greater, not less, less, or not greater, respectively, then return character number from beginning of foo where they begin to differ. Otherwise return NIL.

$\left\{ \begin{array}{l} \text{string-not-equal} \\ \text{string-greaterp} \\ \text{string-not-lessp} \\ \text{string-lessp} \\ \text{string-not-greaterp} \end{array} \right\} foo \ bar \left\{ \begin{array}{l} \text{:start1 } start-foo_{0} \\ \text{:start2 } start-bar_{0} \\ \text{:end1 } end-foo_{NIL} \\ \text{:end2 } end-bar_{NIL} \end{array} \right\}$

▷ If foo is lexicographically not equal, greater, not less, less, or not greater, respectively, ignoring case, then return character number from beginning of foo where they begin to differ. Otherwise return NIL.

$(\text{string } x)$

▷ Convert x (**symbol**, **string**, or **character**) into a string.

$(\text{make-string } size \left\{ \begin{array}{l} \text{:initial-element } char \\ \text{:element-type } type_{character} \end{array} \right\})$

▷ Return string of length $size$.

$\left\{ \begin{array}{l} \text{string} \\ \text{nstring} \end{array} \right\} \left\{ \begin{array}{l} \text{capitalize} \\ \text{uppercase} \\ \text{downcase} \end{array} \right\} string \left\{ \begin{array}{l} \text{:start } start_{0} \\ \text{:end } end_{NIL} \end{array} \right\}$

▷ Return string (not modified or modified, respectively) with first letter of every word turned into uppercase, letters all uppercase, or letters all lowercase, respectively.

6 Sequences

6.1 Sequence Predicates

$\left\{ \begin{array}{l} \text{every} \\ \text{notevery} \end{array} \right\}^{\text{Fu}}$ *test sequence*⁺)

▷ Return **NIL** or **T**, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns **NIL**.

$\left\{ \begin{array}{l} \text{some} \\ \text{notany} \end{array} \right\}^{\text{Fu}}$ *test sequence*⁺)

▷ Return value of *test* or **NIL**, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns non-**NIL**.

$\left(\begin{array}{l} \text{mismatch } \textit{sequence-a} \textit{ sequence-b} \\ \left\{ \begin{array}{l} \text{:from-end } \textit{bool}_{\text{NIL}} \\ \left\{ \begin{array}{l} \text{:test } \textit{function}_{\text{\#'eq}} \\ \text{:test-not } \textit{function} \\ \text{:start1 } \textit{start-a}_{\text{0}} \\ \text{:start2 } \textit{start-b}_{\text{0}} \\ \text{:end1 } \textit{end-a}_{\text{NIL}} \\ \text{:end2 } \textit{end-b}_{\text{NIL}} \\ \text{:key } \textit{function} \end{array} \right\} \end{array} \right\} \end{array} \right)$

▷ Return position in *sequence-a* where *sequence-a* and *sequence-b* begin to mismatch. Return **NIL** if they match entirely.

6.2 Sequence Functions

$\left(\begin{array}{l} \text{make-sequence } \textit{sequence-type} \textit{ size} \left[\text{:initial-element } \textit{foo} \right] \end{array} \right)$

▷ Make sequence of *sequence-type* with *size* elements.

$\left(\begin{array}{l} \text{concatenate } \textit{type} \textit{ sequence}^* \end{array} \right)$

▷ Return concatenated sequence of *type*.

$\left(\begin{array}{l} \text{merge } \textit{type} \textit{ sequence-a} \textit{ sequence-b} \textit{ test} \left[\text{:key function}_{\text{NIL}} \right] \end{array} \right)$

▷ Return interleaved sequence of *type*. Merged sequence will be sorted if both *sequence-a* and *sequence-b* are sorted.

$\left(\begin{array}{l} \text{fill } \textit{sequence} \textit{ foo} \left\{ \begin{array}{l} \text{:start } \textit{start}_{\text{0}} \\ \text{:end } \textit{end}_{\text{NIL}} \end{array} \right\} \end{array} \right)$

▷ Return sequence after setting elements between *start* and *end* to *foo*.

$\left(\begin{array}{l} \text{length } \textit{sequence} \end{array} \right)$

▷ Return length of *sequence* (being value of fill pointer if applicable).

$\left(\begin{array}{l} \text{count } \textit{foo} \textit{ sequence} \left\{ \begin{array}{l} \text{:from-end } \textit{bool}_{\text{NIL}} \\ \left\{ \begin{array}{l} \text{:test } \textit{function}_{\text{\#'eq}} \\ \text{:test-not } \textit{function} \\ \text{:start } \textit{start}_{\text{0}} \\ \text{:end } \textit{end}_{\text{NIL}} \\ \text{:key } \textit{function} \end{array} \right\} \end{array} \right\} \end{array} \right)$

▷ Return number of *foos* in *sequence* which satisfy tests.

$\left\{ \begin{array}{l} \text{count-if} \\ \text{count-if-not} \end{array} \right\}^{\text{Fu}}$ *test sequence* $\left\{ \begin{array}{l} \text{:from-end } \textit{bool}_{\text{NIL}} \\ \text{:start } \textit{start}_{\text{0}} \\ \text{:end } \textit{end}_{\text{NIL}} \\ \text{:key } \textit{function} \end{array} \right\}$

▷ Return number of elements in *sequence* which satisfy *test*.

$\left(\begin{array}{l} \text{elt } \textit{sequence} \textit{ index} \end{array} \right)$

▷ Return element of *sequence* pointed to by zero-indexed *index*. **setfable**.

$\left(\begin{array}{l} \text{subseq } \textit{sequence} \textit{ start} \left[\textit{end}_{\text{NIL}} \right] \end{array} \right)$

▷ Return subsequence of *sequence* between *start* and *end*. **setfable**.

$\left\{ \begin{array}{l} \text{sort} \\ \text{stable-sort} \end{array} \right\}^{\text{Fu}}$ *sequence test* $[\text{:key function}]$

▷ Return sequence sorted. Order of elements considered equal is not guaranteed/retained, respectively.

$\left(\begin{array}{l} \text{reverse } \textit{sequence} \\ \text{nreverse } \textit{sequence} \end{array} \right)$

▷ Return sequence in reverse order.

$\left(\begin{array}{l} \text{cXr } \textit{list} \end{array} \right)^{\text{Fu}}$

▷ With *X* being one to four as and **ds** representing **cars** and **cdrs**, e.g. $\left(\text{cadr } \textit{bar} \right)$ is equivalent to $\left(\text{car } \left(\text{cdr } \textit{bar} \right) \right)$. **setfable**.

$\left(\begin{array}{l} \text{last } \textit{list} \left[\textit{num}_{\text{0}} \right] \end{array} \right)$

▷ Return list of last *num* conses of *list*.

$\left\{ \begin{array}{l} \text{butlast } \textit{list} \\ \text{nbutlast } \textit{list} \end{array} \right\}^{\text{Fu}}$ $[\textit{num}_{\text{0}}]$

▷ Return *list* excluding last *num* conses.

$\left\{ \begin{array}{l} \text{rplaca} \\ \text{rplacd} \end{array} \right\}^{\text{Fu}}$ *cons object*)

▷ Replace car, or cdr, respectively, of *cons* with *object*.

$\left(\begin{array}{l} \text{ldiff } \textit{list} \textit{ foo} \end{array} \right)$

▷ If *foo* is a tail of *list*, return preceding part of *list*. Otherwise return *list*.

$\left(\begin{array}{l} \text{adjoin } \textit{foo} \textit{ list} \left\{ \begin{array}{l} \text{:test } \textit{function}_{\text{\#'eq}} \\ \text{:test-not } \textit{function} \\ \text{:key } \textit{function} \end{array} \right\} \end{array} \right)$

▷ Return *list* if *foo* is already member of *list*. If not, return $\left(\text{cons } \textit{foo} \textit{ list} \right)$.

$\left(\begin{array}{l} \text{pop } \textit{place} \end{array} \right)$

▷ Set *place* to $\left(\text{cdr } \textit{place} \right)$, return $\left(\text{car } \textit{place} \right)$.

$\left(\begin{array}{l} \text{push } \textit{foo} \textit{ place} \end{array} \right)$

▷ Set *place* to $\left(\text{cons } \textit{foo} \textit{ place} \right)$.

$\left(\begin{array}{l} \text{pushnew } \textit{foo} \textit{ place} \left\{ \begin{array}{l} \text{:test } \textit{function}_{\text{\#'eq}} \\ \text{:test-not } \textit{function} \\ \text{:key } \textit{function} \end{array} \right\} \end{array} \right)$

▷ Set *place* to $\left(\text{adjoin } \textit{foo} \textit{ place} \right)$.

$\left(\begin{array}{l} \text{append } \left[\textit{list}^* \textit{ foo} \right] \end{array} \right)$

$\left(\begin{array}{l} \text{nconc } \left[\textit{list}^* \textit{ foo} \right] \end{array} \right)$

▷ Return concatenated list. *foo* can be of any type.

$\left(\begin{array}{l} \text{revappend } \textit{list} \textit{ foo} \end{array} \right)$

$\left(\begin{array}{l} \text{nreconc } \textit{list} \textit{ foo} \end{array} \right)$

▷ Return concatenated list after reversing order in *list*.

$\left\{ \begin{array}{l} \text{mapcar} \\ \text{maplist} \end{array} \right\}^{\text{Fu}}$ *function list*⁺)

▷ Return list of return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*.

$\left\{ \begin{array}{l} \text{mapcan} \\ \text{mapcon} \end{array} \right\}^{\text{Fu}}$ *function list*⁺)

▷ Return list of concatenated return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should return a list.

$\left\{ \begin{array}{l} \text{mapc} \\ \text{mapl} \end{array} \right\}^{\text{Fu}}$ *function list*⁺)

▷ Return first *list* after successively applying *function* to corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should have some side effects.

$\left(\begin{array}{l} \text{copy-list } \textit{list} \end{array} \right)$

▷ Return copy of *list* with shared elements.

4.3 Association Lists

$\left(\begin{array}{l} \text{pairlis } \textit{keys} \textit{ values} \left[\textit{alist}_{\text{NIL}} \right] \end{array} \right)$

▷ Prepend to *alist* an association list made from lists *keys* and *values*.

$\left(\begin{array}{l} \text{acons } \textit{key} \textit{ value} \textit{ alist} \end{array} \right)$

▷ Return *alist* with a $\left(\textit{key} . \textit{value} \right)$ pair added.

$\left\{ \begin{array}{l} \text{assoc} \\ \text{rassoc} \end{array} \right\}^{\text{Fu}}$ *foo alist* $\left\{ \begin{array}{l} \text{:test } \textit{test}_{\text{\#'eq}} \\ \text{:test-not } \textit{test} \\ \text{:key } \textit{function} \end{array} \right\}$

$\left\{ \begin{array}{l} \text{assoc-if[-not]} \\ \text{rassoc-if[-not]} \end{array} \right\}^{\text{Fu}}$ *test alist* $[\text{:key function}]$

▷ First *cons* whose car, or cdr, respectively, satisfies *test*.

$\left(\begin{array}{l} \text{copy-alist } \textit{alist} \end{array} \right)$

▷ Return copy of *alist*.

4.4 Trees

$(\overset{\text{Fu}}{\text{tree-equal}} \text{foo bar} \left\{ \begin{array}{l} \text{:test } \text{test}_{\text{#eq}} \\ \text{:test-not } \text{test} \end{array} \right\})$

▷ Return T if trees *foo* and *bar* have same shape and leaves satisfying *test*.

$\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{subst}} \text{ new old tree} \\ \overset{\text{Fu}}{\text{nsubst}} \text{ new old tree} \end{array} \right\} \left\{ \begin{array}{l} \text{:test function}_{\text{#eq}} \\ \text{:test-not function} \\ \text{:key function} \end{array} \right\}$

▷ Make copy of *tree* with each subtree or leaf matching *old* replaced by *new*.

$\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{subst-if[-not]}} \text{ new test tree} \\ \overset{\text{Fu}}{\text{nsubst-if[-not]}} \text{ new test tree} \end{array} \right\} [\text{:key function}]$

▷ Make copy of *tree* with each subtree or leaf satisfying *test* replaced by *new*.

$\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{sublis}} \text{ association-list tree} \\ \overset{\text{Fu}}{\text{nsublis}} \text{ association-list tree} \end{array} \right\} \left\{ \begin{array}{l} \text{:test function}_{\text{#eq}} \\ \text{:test-not function} \\ \text{:key function} \end{array} \right\}$

▷ Make copy of *tree* with each subtree or leaf matching a key in *association-list* replaced by that key's value.

$(\overset{\text{Fu}}{\text{copy-tree}} \text{tree})$ ▷ Copy of *tree* with same shape and leaves.

4.5 Sets

$\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{intersection}} \\ \overset{\text{Fu}}{\text{set-difference}} \\ \overset{\text{Fu}}{\text{union}} \\ \overset{\text{Fu}}{\text{set-exclusive-or}} \\ \overset{\text{Fu}}{\text{intersection}} \\ \overset{\text{Fu}}{\text{nset-difference}} \\ \overset{\text{Fu}}{\text{nunion}} \\ \overset{\text{Fu}}{\text{nset-exclusive-or}} \end{array} \right\} \left\{ \begin{array}{l} a \ b \\ \tilde{a} \ b \\ \tilde{a} \ \tilde{b} \end{array} \right\} \left\{ \begin{array}{l} \text{:test function}_{\text{#eq}} \\ \text{:test-not function} \\ \text{:key function} \end{array} \right\}$

▷ Return $a \cap b$, $a \setminus b$, $a \cup b$, or $a \Delta b$, respectively, of lists *a* and *b*.

5 Arrays

5.1 Predicates

$(\overset{\text{Fu}}{\text{arrayp}} \text{foo})$

$(\overset{\text{Fu}}{\text{vectorp}} \text{foo})$

$(\overset{\text{Fu}}{\text{simple-vector-p}} \text{foo})$

▷ T if *foo* is of indicated type.

$(\overset{\text{Fu}}{\text{bit-vector-p}} \text{foo})$

$(\overset{\text{Fu}}{\text{simple-bit-vector-p}} \text{foo})$

$(\overset{\text{Fu}}{\text{adjustable-array-p}} \text{array})$

$(\overset{\text{Fu}}{\text{array-has-fill-pointer-p}} \text{array})$

▷ Return T if *array* is adjustable/has a fill pointer, respectively.

$(\overset{\text{Fu}}{\text{array-in-bounds-p}} \text{array} [\text{subscripts}])$

▷ Return T if *subscripts* are in *array*'s bounds.

5.2 Array Functions

$\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{make-array}} \text{ dimension-sizes} [\text{:adjustable } \text{bool}_{\text{NIL}}] \\ \overset{\text{Fu}}{\text{adjust-array}} \text{ array dimension-sizes} \end{array} \right\}$

$\left\{ \begin{array}{l} \text{:element-type } \text{type}_{\text{NIL}} \\ \text{:fill-pointer } \{ \text{num} \} \text{bool}_{\text{NIL}} \\ \text{:initial-element } \text{obj} \\ \text{:initial-contents } \text{sequence} \\ \text{:displaced-to } \text{array}_{\text{NIL}} [\text{:displaced-index-offset } \text{io}_{\text{NIL}}] \end{array} \right\}$

▷ Return fresh, or readjust, respectively, vector or array.

$(\overset{\text{Fu}}{\text{aref}} \text{array} [\text{subscripts}])$

▷ Return array element pointed to by *subscripts*. **setfable**.

$(\overset{\text{Fu}}{\text{row-major-aref}} \text{array } i)$

▷ Return *i*th element of *array* in row-major order. **setfable**.

$(\overset{\text{Fu}}{\text{array-row-major-index}} \text{array} [\text{subscripts}])$

▷ Index in row-major order of the element denoted by *subscripts*.

$(\overset{\text{Fu}}{\text{array-dimensions}} \text{array})$

▷ List containing the lengths of *array*'s dimensions.

$(\overset{\text{Fu}}{\text{array-dimension}} \text{array } i)$

▷ Length of *i*th dimension of *array*.

$(\overset{\text{Fu}}{\text{array-total-size}} \text{array})$

▷ Number of elements in *array*.

$(\overset{\text{Fu}}{\text{array-rank}} \text{array})$

▷ Number of dimensions of *array*.

$(\overset{\text{Fu}}{\text{array-displacement}} \text{array})$

▷ Target array and offset.

$(\overset{\text{Fu}}{\text{bit}} \text{bit-array} [\text{subscripts}])$

$(\overset{\text{Fu}}{\text{sbit}} \text{simple-bit-array} [\text{subscripts}])$

▷ Return element of *bit-array* or of *simple-bit-array*. **setfable**.

$(\overset{\text{Fu}}{\text{bit-not}} \widetilde{\text{bit-array}} [\widetilde{\text{result-bit-array}}_{\text{NIL}}])$

▷ Return result of bitwise negation of *bit-array*. If *result-bit-array* is T, put result in *bit-array*; if it is NIL, make a new array for result.

$\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{bit-eqv}} \\ \overset{\text{Fu}}{\text{bit-and}} \\ \overset{\text{Fu}}{\text{bit-andc1}} \\ \overset{\text{Fu}}{\text{bit-andc2}} \\ \overset{\text{Fu}}{\text{bit-nand}} \\ \overset{\text{Fu}}{\text{bit-ior}} \\ \overset{\text{Fu}}{\text{bit-orc1}} \\ \overset{\text{Fu}}{\text{bit-orc2}} \\ \overset{\text{Fu}}{\text{bit-xor}} \\ \overset{\text{Fu}}{\text{bit-nor}} \end{array} \right\} \widetilde{\text{bit-array-a}} \ \widetilde{\text{bit-array-b}} [\widetilde{\text{result-bit-array}}_{\text{NIL}}]$

▷ Return result of bitwise logical operations (cf. operations of **boole**, p. 4) on *bit-array-a* and *bit-array-b*. If *result-bit-array* is T, put result in *bit-array-a*; if it is NIL, make a new array for result.

$\overset{\text{Co}}{\text{array-rank-limit}}$

▷ Upper bound of array rank; ≥ 8 .

$\overset{\text{Co}}{\text{array-dimension-limit}}$

▷ Upper bound of an array dimension; ≥ 1024 .

$\overset{\text{Co}}{\text{array-total-size-limit}}$

▷ Upper bound of array size; ≥ 1024 .

5.3 Vector Functions

Vectors can as well be manipulated by sequence functions; see section 6.

$(\overset{\text{Fu}}{\text{vector}} \text{foo}^*)$

▷ Return fresh simple vector of *foos*.

$(\overset{\text{Fu}}{\text{svref}} \text{vector } i)$

▷ Return element *i* of simple *vector*. **setfable**.

$(\overset{\text{Fu}}{\text{vector-push}} \text{foo } \widetilde{\text{vector}})$

▷ Return NIL if *vector*'s fill pointer equals size of *vector*. Otherwise replace element of *vector* pointed to by fill pointer with *foo*; then increment fill pointer.

$(\overset{\text{Fu}}{\text{vector-push-extend}} \text{foo } \widetilde{\text{vector}} [\text{num}])$

▷ Replace element of *vector* pointed to by fill pointer with *foo*, then increment fill pointer. Extend *vector*'s size by $\geq \text{num}$ if necessary.

$(\overset{\text{Fu}}{\text{vector-pop}} \widetilde{\text{vector}})$

▷ Return element of *vector* its fillpointer points to after decrementation.

$(\overset{\text{Fu}}{\text{fill-pointer}} \text{vector})$

▷ Fill pointer of *vector*. **setfable**.

9.2 Variables

$\left\{ \begin{array}{l} \text{defconstant} \\ \text{defparameter} \end{array} \right\}^M \widehat{foo} \text{ form } [\widehat{doc}]$

▷ Assign value of *form* to global constant/dynamic variable *foo*.

$(\text{defvar } \widehat{foo} [\text{form } [\widehat{doc}]])^M$

▷ Unless bound already, assign value of *form* to dynamic variable *foo*.

$\left\{ \begin{array}{l} \text{setf} \\ \text{psetf} \end{array} \right\}^M \{ \text{place form} \}^*$

▷ Set *places* to primary values of *forms*. Return values of last *form*/NIL; work sequentially/in parallel, respectively.

$\left\{ \begin{array}{l} \text{setq} \\ \text{psetq} \end{array} \right\}^{\text{SO}} \{ \text{symbol form} \}^*$

▷ Set *symbols* to primary values of *forms*. Return value of last *form*/NIL; work sequentially/in parallel, respectively.

$(\text{set } \widetilde{\text{symbol}} \text{ foo})^{\text{Fu}}$

▷ Set *symbol*'s value cell to *foo*. Deprecated.

$(\text{multiple-value-setq } \text{vars } \text{form})^M$

▷ Set elements of *vars* to the values of *form*. Return *form*'s primary value.

$(\text{shiftf } \widetilde{\text{place}}^+ \text{ foo})^M$

▷ Store value of *foo* in rightmost *place* shifting values of *places* left, returning first place.

$(\text{rotatef } \widetilde{\text{place}}^*)^M$

▷ Rotate values of *places* left, old first becoming new last *place*'s value. Return NIL.

$(\text{makunbound } \widetilde{\text{foo}})^{\text{Fu}}$

▷ Delete special variable *foo* if any.

$(\text{get } \text{symbol } \text{key } [\text{default } \text{NIL}])^{\text{Fu}}$

$(\text{getf } \text{place } \text{key } [\text{default } \text{NIL}])^{\text{Fu}}$

▷ First entry *key* from property list stored in *symbol*/in *place*, respectively, or *default* if there is no *key*. setfable.

$(\text{get-properties } \text{property-list } \text{keys})^{\text{Fu}}$

▷ Return key and value of first entry from *property-list* matching a key from *keys*, and tail of *property-list* starting with that key. Return NIL, NIL, and NIL if there was no matching key in *property-list*.

$(\text{remprop } \widetilde{\text{symbol}} \text{ key})^{\text{Fu}}$

$(\text{remf } \text{place } \text{key})^M$

▷ Remove first entry *key* from property list stored in *symbol*/in *place*, respectively. Return T if *key* was there, or NIL otherwise.

9.3 Functions

Below, ordinary lambda list (*ord-λ**) has the form

$(\text{var}^* [\&\text{optional } \left\{ \begin{array}{l} \text{var} \\ \text{init } \text{NIL} \\ \text{supplied-p} \end{array} \right\}^*] [\&\text{rest } \text{var}])$

$[\&\text{key } \left\{ \begin{array}{l} \text{var} \\ \text{key } \text{var} \end{array} \right\} [\text{init } \text{NIL} [\text{supplied-p}]] \right\}^*$

$[\&\text{allow-other-keys}] [\&\text{aux } \left\{ \begin{array}{l} \text{var} \\ \text{init } \text{NIL} \\ \text{supplied-p} \end{array} \right\}^*]$

supplied-p is T if there is a corresponding argument. *init* forms can refer to any *init* and *supplied-p* to their left.

$\left\{ \begin{array}{l} \text{defun} \\ \text{lambda} \end{array} \right\}^M \left\{ \begin{array}{l} \text{foo } (\text{ord-}\lambda^*) \\ (\text{setf } \text{foo}) (\text{new-value } \text{ord-}\lambda^*) \end{array} \right\} (\text{declare } \widehat{\text{decl}}^*)^* [\widehat{\text{doc}}]$

form^{*}

▷ Define a function named *foo* or (*setf foo*), or an anonymous function, respectively, which applies *forms* to *ord-λs*. For *defun*, *forms* are enclosed in an implicit **block** *foo*.

$\left\{ \begin{array}{l} \text{find} \\ \text{position} \end{array} \right\}^{\text{Fu}} \text{foo sequence} \left\{ \begin{array}{l} \text{:from-end } \text{bool } \text{NIL} \\ \text{:test } \text{test } \text{NIL} \\ \text{:test-not } \text{test} \\ \text{:start } \text{start } \text{NIL} \\ \text{:end } \text{end } \text{NIL} \\ \text{:key } \text{function} \end{array} \right\}$

▷ Return first element in *sequence* which satisfies *test*, or its position relative to the begin of *sequence*, respectively.

$\left\{ \begin{array}{l} \text{find-if} \\ \text{find-if-not} \\ \text{position-if} \\ \text{position-if-not} \end{array} \right\}^{\text{Fu}} \text{test sequence} \left\{ \begin{array}{l} \text{:from-end } \text{bool } \text{NIL} \\ \text{:start } \text{start } \text{NIL} \\ \text{:end } \text{end } \text{NIL} \\ \text{:key } \text{function} \end{array} \right\}$

▷ Return first element in *sequence* which satisfies *test*, or its position relative to the begin of *sequence*, respectively.

$(\text{search } \text{sequence-a } \text{sequence-b})^{\text{Fu}} \left\{ \begin{array}{l} \text{:from-end } \text{bool } \text{NIL} \\ \text{:test } \text{function } \text{NIL} \\ \text{:test-not } \text{function} \\ \text{:start1 } \text{start-a } \text{NIL} \\ \text{:start2 } \text{start-b } \text{NIL} \\ \text{:end1 } \text{end-a } \text{NIL} \\ \text{:end2 } \text{end-b } \text{NIL} \\ \text{:key } \text{function} \end{array} \right\}$

▷ Search *sequence-b* for a subsequence matching *sequence-a*. Return position in *sequence-b*, or NIL.

$\left\{ \begin{array}{l} \text{remove } \text{foo } \text{sequence} \\ \text{delete } \text{foo } \text{sequence} \end{array} \right\}^{\text{Fu}} \left\{ \begin{array}{l} \text{:from-end } \text{bool } \text{NIL} \\ \text{:test } \text{function } \text{NIL} \\ \text{:test-not } \text{function} \\ \text{:start } \text{start } \text{NIL} \\ \text{:end } \text{end } \text{NIL} \\ \text{:key } \text{function} \\ \text{:count } \text{count } \text{NIL} \end{array} \right\}$

▷ Make copy of *sequence* without elements matching *foo*.

$\left\{ \begin{array}{l} \text{remove-if} \\ \text{remove-if-not} \\ \text{delete-if} \\ \text{delete-if-not} \end{array} \right\}^{\text{Fu}} \text{test sequence} \left\{ \begin{array}{l} \text{:from-end } \text{bool } \text{NIL} \\ \text{:start } \text{start } \text{NIL} \\ \text{:end } \text{end } \text{NIL} \\ \text{:key } \text{function} \\ \text{:count } \text{count } \text{NIL} \end{array} \right\}$

▷ Make copy of *sequence* with all (or *count*) elements satisfying *test* removed.

$\left\{ \begin{array}{l} \text{remove-duplicates } \text{sequence} \\ \text{delete-duplicates } \text{sequence} \end{array} \right\}^{\text{Fu}} \left\{ \begin{array}{l} \text{:from-end } \text{bool } \text{NIL} \\ \text{:test } \text{function } \text{NIL} \\ \text{:test-not } \text{function} \\ \text{:start } \text{start } \text{NIL} \\ \text{:end } \text{end } \text{NIL} \\ \text{:key } \text{function} \end{array} \right\}$

▷ Make copy of *sequence* without duplicates.

$\left\{ \begin{array}{l} \text{substitute } \text{new } \text{old } \text{sequence} \\ \text{nsubstitute } \text{new } \text{old } \text{sequence} \end{array} \right\}^{\text{Fu}} \left\{ \begin{array}{l} \text{:from-end } \text{bool } \text{NIL} \\ \text{:test } \text{function } \text{NIL} \\ \text{:test-not } \text{function} \\ \text{:start } \text{start } \text{NIL} \\ \text{:end } \text{end } \text{NIL} \\ \text{:key } \text{function} \\ \text{:count } \text{count } \text{NIL} \end{array} \right\}$

▷ Make copy of *sequence* with all (or *count*) olds replaced by *new*.

$\left\{ \begin{array}{l} \text{substitute-if} \\ \text{substitute-if-not} \\ \text{nsubstitute-if} \\ \text{nsubstitute-if-not} \end{array} \right\}^{\text{Fu}} \text{new test sequence} \left\{ \begin{array}{l} \text{:from-end } \text{bool } \text{NIL} \\ \text{:start } \text{start } \text{NIL} \\ \text{:end } \text{end } \text{NIL} \\ \text{:key } \text{function} \\ \text{:count } \text{count } \text{NIL} \end{array} \right\}$

▷ Make copy of *sequence* with all (or *count*) elements satisfying *test* replaced by *new*.

$(\text{replace } \text{sequence-a } \text{sequence-b})^{\text{Fu}} \left\{ \begin{array}{l} \text{:start1 } \text{start-a } \text{NIL} \\ \text{:start2 } \text{start-b } \text{NIL} \\ \text{:end1 } \text{end-a } \text{NIL} \\ \text{:end2 } \text{end-b } \text{NIL} \end{array} \right\}$

▷ Replace elements of *sequence-a* with elements of *sequence-b*.

^{Fu}(**map** *type function sequence*⁺)

▷ Apply *function* successively to corresponding elements of the *sequences*. Return values as a sequence of *type*. If *type* is NIL, return NIL.

^{Fu}(**map-into** *result-sequence function sequence*^{*})

▷ Store into result-sequence successively values of *function* applied to corresponding elements of the *sequences*.

^{Fu}(**reduce** *function sequence* $\left\{ \begin{array}{l} \text{:initial-value } \widehat{foo}_{\text{NIL}} \\ \text{:from-end } \widehat{bool}_{\text{NIL}} \\ \text{:start } \widehat{start}_{\text{0}} \\ \text{:end } \widehat{end}_{\text{NIL}} \\ \text{:key } \widehat{function} \end{array} \right\}$)

▷ Starting with the first two elements of *sequence*, apply *function* successively to its last return value together with the next element of *sequence*. Return last value of function.

^{Fu}(**copy-seq** *sequence*)

▷ Return copy of *sequence* with shared elements.

7 Hash Tables

Key-value storage similar to hash tables can as well be achieved using association lists and property lists; see pages 9 and 16.

^{Fu}(**hash-table-p** *foo*) ▷ Return T if *foo* is of type **hash-table**.

^{Fu}(**make-hash-table** $\left\{ \begin{array}{l} \text{:test } \{\widehat{eq}|\widehat{eql}|\widehat{equal}|\widehat{equalp}\}_{\#\widehat{eq}} \\ \text{:size } \widehat{int} \\ \text{:rehash-size } \widehat{num} \\ \text{:rehash-threshold } \widehat{num} \end{array} \right\}$)

▷ Make a hash table.

^{Fu}(**gethash** *key hash-table* [*default*]_{NIL})

▷ Return object with *key* if any or *default* otherwise; and T if found, NIL otherwise. **setfable**.

^{Fu}(**hash-table-count** *hash-table*)

▷ Number of entries in *hash-table*.

^{Fu}(**remhash** *key hash-table*)

▷ Remove from *hash-table* entry with *key* and return T if it existed. Return NIL otherwise.

^{Fu}(**clrhash** *hash-table*) ▷ Empty hash-table.

^{Fu}(**maphash** *function hash-table*)

▷ Iterate over *hash-table* calling *function* on key and value. Return NIL.

^M(**with-hash-table-iterator** (*foo hash-table*) (**declare** \widehat{decl}^*)^{*} *form*^{F*})

▷ Return values of *forms*. In *forms*, invocations of (*foo*) return: T if an entry is returned; its key; its value.

^{Fu}(**hash-table-test** *hash-table*)

▷ Test function used in *hash-table*.

^{Fu}(**hash-table-size** *hash-table*)

^{Fu}(**hash-table-rehash-size** *hash-table*)

^{Fu}(**hash-table-rehash-threshold** *hash-table*)

▷ Current size, rehash-size, or rehash-threshold, respectively, as used in **make-hash-table**.

^{Fu}(**sxhash** *foo*)

▷ Hash code unique for any argument equal *foo*.

8 Structures

^M(**defstruct** $\left\{ \begin{array}{l} \widehat{foo} \{ \widehat{foo} \\ \text{:conc-name} \\ \text{:conc-name } [\widehat{slot-prefix} \widehat{foo-P}] \\ \text{:constructor} \\ \text{:constructor } [\widehat{maker} \widehat{MAKE-foo} [(\widehat{ord-\lambda}^*)]] \\ \text{:copier} \\ \text{:copier } [\widehat{copier} \widehat{COPY-foo}] \\ \text{:include } \widehat{struct} \left\{ \begin{array}{l} \widehat{slot} \\ \widehat{slot} [\widehat{init} \left\{ \begin{array}{l} \text{:type } \widehat{type} \\ \text{:read-only } \widehat{bool} \end{array} \right\}] \end{array} \right\} \\ \left\{ \begin{array}{l} \text{:type } \left\{ \begin{array}{l} \text{list} \\ \text{vector} \\ \text{vector } \widehat{size} \end{array} \right\} \\ \left\{ \begin{array}{l} \text{:named} \\ \text{:initial-offset } \widehat{n} \end{array} \right\} \end{array} \right\} \\ \left\{ \begin{array}{l} \text{:print-object } [o\text{-printer}] \\ \text{:print-function } [f\text{-printer}] \end{array} \right\} \\ \text{:predicate} \\ \text{:predicate } [\widehat{p-name} \widehat{foo-P}] \end{array} \right\} \left\{ \begin{array}{l} \widehat{slot} \\ \left\{ \begin{array}{l} \widehat{slot} [\widehat{init} \left\{ \begin{array}{l} \text{:type } \widehat{type} \\ \text{:read-only } \widehat{bool} \end{array} \right\}] \end{array} \right\} \end{array} \right\} \right\}$)

▷ Define structure type *foo* together with functions **MAKE-foo**, **COPY-foo** and (unless **:type** without **:named** is used) *foo-P*; and **setfable** accessors *foo-slot*. Instances of type *foo* can be created by (**MAKE-foo** $\{\widehat{slot} \widehat{value}\}^*$) or, if *ord-λ* (see p. 16) is given, by (*maker* *arg*^{*} $\{\widehat{key} \widehat{value}\}^*$). In the latter case, *args* and *keys* correspond to the positional and keyword parameters defined in *ord-λ* whose *vars* in turn correspond to *slots*. **:print-object**/**:print-function** generate a **print-object** method for an instance *bar* of *foo* calling (*o-printer bar stream*) or (*f-printer bar stream print-level*), respectively.

^{Fu}(**copy-structure** *structure*)

▷ Return copy of *structure* with shared slot values.

9 Control Structure

9.1 Predicates

^{Fu}(**eq** *foo bar*) ▷ T if *foo* and *bar* are identical.

^{Fu}(**eql** *foo bar*)

▷ T if *foo* and *bar* are identical, or the same **character**, or **numbers** of the same type and value.

^{Fu}(**equal** *foo bar*)

▷ T if *foo* and *bar* are equal, or are equivalent **pathnames**, or are **conses** with equal cars and cdrs, or are **strings** or **bit-vectors** with equal elements below their fill pointers.

^{Fu}(**equalp** *foo bar*)

▷ T if *foo* and *bar* are identical; or are the same **character** ignoring case; or are **numbers** of the same value ignoring type; or are equivalent **pathnames**; or are **conses** or **arrays** of the same shape with equalp elements; or are structures of the same type with equalp elements; or are **hash-tables** of the same size with the same **:test** function, the same keys in terms of **:test** function, and equalp elements.

^{Fu}(**not** *foo*) ▷ T if *foo* is NIL, NIL otherwise.

^{Fu}(**boundp** *symbol*)

▷ T if *symbol* is a special variable.

^{Fu}(**constantp** *foo* [*environment*]_{NIL})

▷ T if *foo* is a constant form.

^{Fu}(**functionp** *foo*)

▷ T if *foo* is of type **function**.

^{Fu}(**fboundp** $\left\{ \begin{array}{l} \widehat{foo} \\ \text{:setf } \widehat{foo} \end{array} \right\}$)

▷ T if *foo* is a global function or macro.

$\left\{ \begin{smallmatrix} \text{let} \\ \text{let*} \end{smallmatrix} \right\}^{\text{SO}}$ $\left(\left\{ \begin{smallmatrix} \text{name} \\ (\text{name} \text{ [value}_{\text{NIL}}] \text{) } \end{smallmatrix} \right\}^* (\text{declare } \widehat{\text{decl}}^*)^* \text{form}^{\text{P}^*} \right)$
 ▷ Evaluate *forms* with *names* lexically bound (in parallel or sequentially, respectively) to *values*. Return values of forms.

$\left\{ \begin{smallmatrix} \text{prog} \\ \text{prog*} \end{smallmatrix} \right\}^{\text{M}}$ $\left(\left\{ \begin{smallmatrix} \text{var} \\ (\text{var} \text{ [value}_{\text{NIL}}] \text{) } \end{smallmatrix} \right\}^* (\text{declare } \widehat{\text{decl}}^*)^* \left\{ \begin{smallmatrix} \text{tag} \\ \text{form} \end{smallmatrix} \right\}^* \right)$
 ▷ Evaluate *tagbody*-like body with *vars* locally bound (in parallel or sequentially, respectively) to *values*. Return NIL or explicitly returned values. Implicitly, the whole form is a **block** named NIL.

$\left(\text{prog}^{\text{SO}} \text{symbols values form}^{\text{P}^*} \right)$
 ▷ Evaluate *forms* with locally established dynamic bindings of *symbols* to *values* or NIL. Return values of forms.

$\left(\text{unwind-protect}^{\text{SO}} \text{protected cleanup}^* \right)$
 ▷ Evaluate *protected* and then, no matter how control leaves *protected*, *cleanups*. Return values of protected.

$\left(\text{destructuring-bind}^{\text{M}} \text{destruct-}\lambda \text{ bar } (\text{declare } \widehat{\text{decl}}^*)^* \text{form}^{\text{P}^*} \right)$
 ▷ Evaluate *forms* with variables from tree *destruct-λ* bound to corresponding elements of tree *bar*, and return their values. *destruct-λ* resembles *macro-λ* (section 9.4), but without any **&environment** clause.

$\left(\text{multiple-value-bind}^{\text{M}} (\widehat{\text{var}}^*) \text{values-form } (\text{declare } \widehat{\text{decl}}^*)^* \text{body-form}^{\text{P}^*} \right)$
 ▷ Evaluate *body-forms* with *vars* lexically bound to the return values of *values-form*. Return values of body-forms.

$\left(\text{block}^{\text{SO}} \text{name form}^{\text{P}^*} \right)$
 ▷ Evaluate *forms* in a lexical environment, and return their values unless interrupted by **return-from**.

$\left(\text{return-from}^{\text{SO}} \text{foo } [\text{result}_{\text{NIL}}] \right)$
 $\left(\text{return}^{\text{M}} [\text{result}_{\text{NIL}}] \right)$
 ▷ Have nearest enclosing **block** named *foo*/named NIL, respectively, return with values of *result*.

$\left(\text{tagbody}^{\text{SO}} \left\{ \begin{smallmatrix} \text{tag} \\ \text{form} \end{smallmatrix} \right\}^* \right)$
 ▷ Evaluate *forms* in a lexical environment. *tags* (symbols or integers) have lexical scope and dynamic extent, and are targets for **go**. Return NIL.

$\left(\text{go}^{\text{SO}} \text{tag} \right)$
 ▷ Within the innermost enclosing **tagbody**, jump to a tag **eql** *tag*.

$\left(\text{catch}^{\text{SO}} \text{tag form}^{\text{P}^*} \right)$
 ▷ Evaluate *forms* and return their values unless interrupted by **throw**.

$\left(\text{throw}^{\text{SO}} \text{tag form} \right)$
 ▷ Have the nearest dynamically enclosing **catch** with a tag **eq** *tag* return with the values of *form*.

$\left(\text{sleep}^{\text{Fu}} n \right)$ ▷ Wait *n* seconds, return NIL.

9.6 Iteration

$\left\{ \begin{smallmatrix} \text{do} \\ \text{do*} \end{smallmatrix} \right\}^{\text{M}}$ $\left(\left\{ \begin{smallmatrix} \text{var} \\ (\text{var} \text{ [start [step]]} \text{) } \end{smallmatrix} \right\}^* (\text{stop result}^{\text{P}^*}) (\text{declare } \widehat{\text{decl}}^*)^* \left\{ \begin{smallmatrix} \text{tag} \\ \text{form} \end{smallmatrix} \right\}^* \right)$
 ▷ Evaluate *tagbody*-like body with *vars* successively bound according to the values of the corresponding *start* and *step* forms. *vars* are bound in parallel/sequentially, respectively. Stop iteration when *stop* is T. Return values of result*. Implicitly, the whole form is a **block** named NIL.

$\left(\text{dotimes}^{\text{M}} (\text{var } i \text{ [result}_{\text{NIL}}] \text{) } (\text{declare } \widehat{\text{decl}}^*)^* \left\{ \begin{smallmatrix} \text{tag} \\ \text{form} \end{smallmatrix} \right\}^* \right)$
 ▷ Evaluate *tagbody*-like body with *var* successively bound to integers from 0 to *i* - 1. Upon evaluation of *result*, *var* is *i*. Implicitly, the whole form is a **block** named NIL.

$\left\{ \begin{smallmatrix} \text{flet} \\ \text{labels} \end{smallmatrix} \right\}^{\text{SO}}$ $\left(\left\{ \begin{smallmatrix} \text{foo } (\text{ord-}\lambda^*) \\ (\text{setf } \text{foo}) (\text{new-value } \text{ord-}\lambda^*) \end{smallmatrix} \right\} (\text{declare } \widehat{\text{local-decl}}^*)^* [\widehat{\text{doc}}] \text{local-form}^{\text{P}^*} \right)^* (\text{declare } \widehat{\text{decl}}^*)^* \text{form}^{\text{P}^*}$
 ▷ Evaluate *forms* with locally defined functions *foo*. Globally defined functions of the same name are shadowed. Each *foo* is also the name of an implicit **block** around its corresponding *local-form**. Only for **labels**, functions *foo* are visible inside *local-forms*. Return values of forms.

$\left(\text{function}^{\text{SO}} \left\{ \begin{smallmatrix} \text{foo} \\ (\text{lambda } \text{form}^*) \end{smallmatrix} \right\} \right)$
 ▷ Return lexically innermost function named *foo* or a lexical closure of the **lambda** expression.

$\left(\text{apply}^{\text{Fu}} \left\{ \begin{smallmatrix} \text{function} \\ (\text{setf } \text{function}) \end{smallmatrix} \right\} \text{arg}^+ \right)$
 ▷ Return values of function called on *args*. Last *arg* must be a list. **setfable** if *function* is one of **aref**, **bit**, and **sbit**.

$\left(\text{funcall}^{\text{Fu}} \text{function } \text{arg}^* \right)$
 ▷ Return values of function called with *args*.

$\left(\text{multiple-value-call}^{\text{SO}} \text{foo form}^* \right)$
 ▷ Call function *foo* with all the values of each *form* as its arguments. Return values returned by foo.

$\left(\text{values-list}^{\text{Fu}} \text{list} \right)$ ▷ Return elements of list.

$\left(\text{values}^{\text{Fu}} \text{foo}^* \right)$
 ▷ Return as multiple values the primary values of the *foos*. **setfable**.

$\left(\text{multiple-value-list}^{\text{Fu}} \text{form} \right)$
 ▷ Return in a list values of *form*.

$\left(\text{nth-value}^{\text{M}} n \text{form} \right)$
 ▷ Zero-indexed nth return value of *form*.

$\left(\text{complement}^{\text{Fu}} \text{function} \right)$
 ▷ Return new function with same arguments and same side effects as *function*, but with complementary truth value.

$\left(\text{constantly}^{\text{Fu}} \text{foo} \right)$
 ▷ Return function of any number of arguments returning *foo*.

$\left(\text{identity}^{\text{Fu}} \text{foo} \right)$ ▷ Return foo.

$\left(\text{function-lambda-expression}^{\text{Fu}} \text{function} \right)$
 ▷ If available, return lambda expression of *function*, NIL if *function* was defined in an environment without bindings, and name of *function*.

$\left(\text{fdefinition}^{\text{Fu}} \left\{ \begin{smallmatrix} \text{foo} \\ (\text{setf } \text{foo}) \end{smallmatrix} \right\} \right)$
 ▷ Definition of global function *foo*. **setfable**.

$\left(\text{fmakunbound}^{\text{Fu}} \text{foo} \right)$
 ▷ Remove global function or macro definition foo.

call-arguments-limit
lambda-parameters-limit
 ▷ Upper bound of the number of function arguments or lambda list parameters, respectively; ≥ 50 .

multiple-values-limit
 ▷ Upper bound of the number of values a multiple value can have; ≥ 20 .

9.4 Macros

Below, macro lambda list (*macro-λ**) has the form of either

$$([\&whole \textit{var}] [E] \left\{ \begin{array}{l} \textit{var} \\ (\textit{macro-}\lambda^*) \end{array} \right\}^* [E])$$

$$([\&optional \left\{ \left\{ \begin{array}{l} \textit{var} \\ (\textit{macro-}\lambda^*) \end{array} \right\} [init_{\text{NIL}} [supplied-p]] \right\}^* [E] \left\{ \begin{array}{l} \&rest \\ \&body \end{array} \right\} \left\{ \begin{array}{l} \textit{var} \\ (\textit{macro-}\lambda^*) \end{array} \right\} [E] \left\{ \begin{array}{l} \&key \\ \left\{ \begin{array}{l} \textit{var} \\ (:key \left\{ \begin{array}{l} \textit{var} \\ (\textit{macro-}\lambda^*) \end{array} \right\}) \end{array} \right\} [init_{\text{NIL}} [supplied-p]] \end{array} \right\}^* [E] \left\{ \begin{array}{l} \&allow-other-keys \\ \&aux \left\{ \begin{array}{l} \textit{var} \\ (\textit{macro-}\lambda^*) \end{array} \right\}^* [E] \end{array} \right\} [E])$$

or $([\&whole \textit{var}] [E] \left\{ \begin{array}{l} \textit{var} \\ (\textit{macro-}\lambda^*) \end{array} \right\}^* [E])$

$$([\&optional \left\{ \left\{ \begin{array}{l} \textit{var} \\ (\textit{macro-}\lambda^*) \end{array} \right\} [init_{\text{NIL}} [supplied-p]] \right\}^* [E] \cdot \textit{var}).$$

One toplevel $[E]$ may be replaced by $\&environment \textit{var}$. *supplied-p* is T if there is a corresponding argument. *init* forms can refer to any *init* and *supplied-p* to their left.

$$\left(\begin{array}{l} \text{defmacro} \\ \text{define-compiler-macro} \end{array} \right) \left\{ \begin{array}{l} \textit{foo} \\ (\text{setf } \textit{foo}) \end{array} \right\} (\textit{macro-}\lambda^*) (\text{declare } \widehat{\textit{decl}}^* \widehat{[\textit{doc}]} \textit{form}^{\text{P}})$$

▷ Define macro *foo* which on evaluation as (*foo tree*) applies expanded *forms* to arguments from *tree*, which corresponds to *tree*-shaped *macro-λ*s. *forms* are enclosed in an implicit **block** *foo*.

$$(\text{define-symbol-macro } \textit{foo} \textit{form})$$

▷ Define symbol macro *foo* which on evaluation evaluates expanded *form*.

$$(\text{macrolet } ((\textit{foo} (\textit{macro-}\lambda^*) (\text{declare } \widehat{\textit{local-decl}}^*) \widehat{[\textit{doc}]} \textit{macro-form}^{\text{P}})^*) (\text{declare } \widehat{\textit{decl}}^*) \textit{form}^{\text{P}})$$

▷ Evaluate *forms* with locally defined mutually invisible macros *foo* which are enclosed in implicit **blocks** of the same name.

$$(\text{symbol-macrolet } ((\textit{foo} \textit{expansion-form})^*) (\text{declare } \widehat{\textit{decl}}^*) \textit{form}^{\text{P}})$$

▷ Evaluate *forms* with locally defined symbol macros *foo*.

$$(\text{defsetf } \widehat{\textit{function}} \left\{ \begin{array}{l} \widehat{\textit{updater}} \widehat{[\textit{doc}]} \\ (\textit{setf-}\lambda^*) (\textit{s-var}^*) (\text{declare } \widehat{\textit{decl}}^*) \widehat{[\textit{doc}]} \textit{form}^{\text{P}} \end{array} \right\})$$

where *defsetf* lambda list (*setf-λ**) has the form

$$(\textit{var}^* [\&optional \left\{ \begin{array}{l} \textit{var} \\ (\textit{var} [init_{\text{NIL}} [supplied-p]]) \end{array} \right\}^* [\&rest \textit{var}] [\&key \left\{ \begin{array}{l} \textit{var} \\ (:key \textit{var}) \end{array} \right\} [init_{\text{NIL}} [supplied-p]] \right\}^* [\&allow-other-keys] [\&environment \textit{var}])$$

▷ Specify how to **setf** a place accessed by *function*. **Short form:** (**setf** (*function arg**) *value-form*) is replaced by (*updater arg* value-form*); the latter must return *value-form*. **Long form:** on invocation of (**setf** (*function arg**) *value-form*), *forms* must expand into code that sets the place accessed where *setf-λ* and *s-var** describe the arguments of *function* and the value(s) to be stored, respectively; and that returns the value(s) of *s-var**. *forms* are enclosed in an implicit **block** named *function*.

$$(\text{define-setf-expander } \textit{function} (\textit{macro-}\lambda^*) (\text{declare } \widehat{\textit{decl}}^*) \widehat{[\textit{doc}]} \textit{form}^{\text{P}})$$

▷ Specify how to **setf** a place accessed by *function*. On invocation of (**setf** (*function arg**) *value-form*), *form** must expand into code returning *arg-vars*, *args*, *newval-vars*, *set-form*, and *get-form* as described with **get-setf-expansion** where the elements of macro lambda list *macro-λ** are bound to corresponding *args*. *forms* are enclosed in an implicit **block** *function*.

$$(\text{get-setf-expansion } \textit{place} [environment_{\text{NIL}}])$$

▷ Return lists of temporary variables *arg-vars* and of corresponding *args* as given with *place*, list *newval-vars* with temporary variables corresponding to the new values, and *set-form* and *get-form* specifying in terms of *arg-vars* and *newval-vars* how to **setf** and how to read *place*.

$$(\text{define-modify-macro } \textit{foo} ([\&optional \left\{ \begin{array}{l} \textit{var} \\ (\textit{var} [init_{\text{NIL}} [supplied-p]]) \end{array} \right\}^* [\&rest \textit{var}]) \textit{function} \widehat{[\textit{doc}]})$$

▷ Define macro *foo* able to modify a place. On invocation of (*foo place arg**), the value of *function* applied to *place* and *args* will be stored into *place* and returned.

lambda-list-keywords

▷ List of macro lambda list keywords. These are at least:

&whole *var*
▷ Bind *var* to the entire macro call form.

&optional *var**
▷ Bind *vars* to corresponding arguments if any.

{&rest &body} *var*
▷ Bind *var* to a list of remaining arguments.

&key *var**
▷ Bind *vars* to corresponding keyword arguments.

&allow-other-keys
▷ Suppress keyword argument checking. Callers can do so using **:allow-other-keys T**.

&environment *var*
▷ Bind *var* to the lexical compilation environment.

&aux *var** ▷ Bind *vars* as in **let***.

9.5 Control Flow

$$(\text{if } \textit{test} \textit{then} [\textit{else}_{\text{NIL}}])$$

▷ Return values of *then* if *test* returns T; return values of *else* otherwise.

$$(\text{cond } (\textit{test} \textit{then}^{\text{P}} [\textit{test}])^*)$$

▷ Return the values of the first *then** whose *test* returns T; return **NIL** if all *tests* return **NIL**.

$$\left(\begin{array}{l} \text{when} \\ \text{unless} \end{array} \right) \textit{test} \textit{foo}^{\text{P}}$$

▷ Evaluate *foos* and return their values if *test* returns T or **NIL**, respectively. Return **NIL** otherwise.

$$(\text{case } \textit{test} \left(\left\{ \begin{array}{l} (\textit{key}^*) \\ \textit{key} \end{array} \right\} \textit{foo}^{\text{P}} \right)^* \left[\left(\begin{array}{l} \text{otherwise} \\ \text{T} \end{array} \right) \textit{bar}^{\text{P}} \right]_{\text{NIL}})$$

▷ Return the values of the first *foo** one of whose *keys* is **eq** *test*. Return values of bars if there is no matching *key*.

$$\left(\begin{array}{l} \text{ecase} \\ \text{ccase} \end{array} \right) \textit{test} \left(\left\{ \begin{array}{l} (\textit{key}^*) \\ \textit{key} \end{array} \right\} \textit{foo}^{\text{P}} \right)^*$$

▷ Return the values of the first *foo** one of whose *keys* is **eq** *test*. Signal non-correctable/correctable **type-error** and return **NIL** if there is no matching *key*.

$$(\text{and } \textit{form}^*_{\text{NIL}})$$

▷ Evaluate *forms* from left to right. Immediately return **NIL** if one *form*'s value is **NIL**. Return values of last form otherwise.

$$(\text{or } \textit{form}^*_{\text{NIL}})$$

▷ Evaluate *forms* from left to right. Immediately return primary value of first non-**NIL**-evaluating form, or all values if last *form* is reached. Return **NIL** if no *form* returns T.

$$(\text{progn } \textit{form}^*_{\text{NIL}})$$

▷ Evaluate *forms* sequentially. Return values of last form.

$$(\text{multiple-value-prog1 } \textit{form-r} \textit{form}^*)$$

$$(\text{prog1 } \textit{form-r} \textit{form}^*)$$

$$(\text{prog2 } \textit{form-a} \textit{form-r} \textit{form}^*)$$

▷ Evaluate forms in order. Return values/1st value, respectively, of *form-r*.

(^{Fu}**find-class** *symbol* [*errorp*] [*environment*])
 ▷ Return class named *symbol*. **setfable**.

(^{Fu}**make-instance** *class* {:*initarg value*}* *other-keyarg**)
 ▷ Make new instance of *class*.

(^{Fu}**reinitialize-instance** *instance* {:*initarg value*}* *other-keyarg**)
 ▷ Change local slots of instance according to *initargs*.

(^{Fu}**slot-value** *foo slot*) ▷ Return value of *slot* in *foo*. **setfable**.

(^{Fu}**slot-makunbound** *instance slot*)
 ▷ Make *slot* in instance unbound.

(^M**with-slots** ((*slot* (*var slot*))*
^M**with-accessors** ((*var accessor*))*
*form**)
instance (**declare** *decl**)*)
 ▷ Return values of *forms* after evaluating them in a lexical environment with slots of *instance* visible as **setfable slots** or *vars*/with *accessors* of *instance* visible as **setfable vars**.

(^{Fu}**class-name** *class*)
 ((^{Fu}**setf class-name**) *new-name class*) ▷ Get/set name of *class*.

(^{Fu}**class-of** *foo*) ▷ Class *foo* is a direct instance of.

(^{Fu}**change-class** *instance new-class* {:*initarg value*}* *other-keyarg**)
 ▷ Change class of instance to *new-class*.

(^{Fu}**make-instances-obsolete** *class*)
 ▷ Update instances of *class*.

(^{Fu}**initialize-instance** (*instance*)
^{Fu}**update-instance-for-different-class** *previous current*)
 {:*initarg value*}* *other-keyarg**)
 ▷ Its primary ^Mmethod sets slots on behalf of ^{Fu}**make-instance**/of ^{Fu}**change-class** by means of **shared-initialize**.

(^{Fu}**update-instance-for-redefined-class** *instances added-slots*
discarded-slots property-list {:*initarg value*}*
*other-keyarg**)
 ▷ Its primary method sets slots on behalf of ^{Fu}**make-instances-obsolete** by means of **shared-initialize**.

(^{Fu}**allocate-instance** *class* {:*initarg value*}* *other-keyarg**)
 ▷ Return uninitialized instance of *class*. Called by ^{Fu}**make-instance**.

(^{Fu}**shared-initialize** *instance* {*slots*}
 {:*initarg value*}* *other-keyarg**)
 ▷ Fill *instance*'s *slots* using *initargs* and **initform** forms.

(^{Fu}**slot-missing** *class object slot* {**setf**
slot-boundp
slot-makunbound
slot-value} [*value*])
 ▷ Called in case of attempted access to missing *slot*. Its primary method signals **error**.

(^{Fu}**slot-unbound** *class instance slot*)
 ▷ Called by ^{Fu}**slot-value** in case of unbound *slot*. Its primary method signals **unbound-slot**.

10.2 Generic Functions

(^{Fu}**next-method-p**)
 ▷ T if enclosing method has a next method.

(^M**defgeneric** {*foo* (**setf** *foo*)} (*required-var** [**&optional** {*var* (*var*)}]*
 [**&rest** *var*] [**&key** {*var* (*var* (*key var*))}]*
 [**&allow-other-keys**])

(^M**dolist** (*var list* [*result*]*) (**declare** *decl**)* {*tag*|*form*}*)
 ▷ Evaluate **tagbody**-like body with *var* successively bound to the elements of *list*. Upon evaluation of *result*, *var* is NIL. Implicitly, the whole form is a **block** named NIL.

9.7 Loop Facility

(^M**loop** *form**)
 ▷ **Simple Loop**. If *forms* do not contain any atomic Loop Facility keywords, evaluate them forever in an implicit **block** named NIL.

(^M**loop** *clause**)
 ▷ **Loop Facility**. For Loop Facility keywords see below and Figure 1.

named *n_{NIL}* ▷ Give ^M**loop**'s implicit **block** a name.

with {*var-s*
 (*var-s**)} [*d-type*] = *foo*)+

and {*var-p*
 (*var-p**)} [*d-type*] = *bar*)*

where destructuring type specifier *d-type* has the form

{**fixnum**|**float**|**T**|**NIL**}{**of-type** {*type* (*type**)}}

▷ Initialize (possibly trees of) local variables *var-s* sequentially and *var-p* in parallel.

{**for**|**as**} {*var-s*
 (*var-s**)} [*d-type*]+ {**and** {*var-p*
 (*var-p**)} [*d-type*]}*

▷ Begin of iteration control clauses. Initialize and step (possibly trees of) local variables *var-s* sequentially and *var-p* in parallel. Destructuring type specifier *d-type* as with **with**.

upfrom|**from**|**downfrom** *start*

▷ Start stepping with *start*

upto|**downto**|**to**|**below**|**above** *form*

▷ Specify *form* as the end value for stepping.

in|**on** *list*

▷ Bind *var* to successive elements/tails, respectively, of *list*.

by {*step*|*function*|*gcd*}

▷ Specify the (positive) decrement or increment or the *function* of one argument returning the next part of the list.

= *foo* [**then** *bar*]

▷ Bind *var* in the first iteration to *foo* and later to *bar*.

across *vector*

▷ Bind *var* to successive elements of *vector*.

being {**the**|**each**}

▷ Iterate over a hash table or a package.

{**hash-key**|**hash-keys**} {**of**|**in**} *hash-table* [**using** (*hash-value value*)]

▷ Bind *var* successively to the keys of *hash-table*; bind *value* to corresponding values.

{**hash-value**|**hash-values**} {**of**|**in**} *hash-table* [**using** (*hash-key key*)]

▷ Bind *var* successively to the values of *hash-table*; bind *key* to corresponding keys.

{**symbol**|**symbols**|**present-symbol**|**present-symbols**|
external-symbol|**external-symbols**} {**of**|**in**}

package|*packages*

▷ Bind *var* successively to the accessible symbols, or the present symbols, or the external symbols respectively, of *package*.

{**do**|**doing**} *form*+
 ▷ Evaluate *forms* in every iteration.

{**if**|**when**|**unless**} *test i-clause* {**and** *j-clause*}* [**else** *k-clause* {**and** *l-clause*}*] [**end**]

▷ If *test* returns T, T, or NIL, respectively, evaluate *i-clause* and *j-clauses*; otherwise, evaluate *k-clause* and *l-clauses*.

it ▷ Inside *i-clause* or *k-clause*: value of test.

return {*form*|**it**}

▷ Return immediately, skipping any **finally** parts, with values of *form* or **it**.

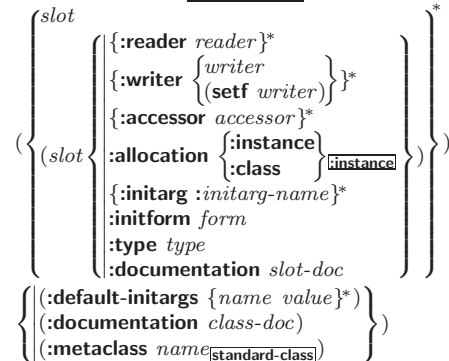

Figure 1: Loop Facility, Overview.

- {collect|collecting}** $\{form|it\}$ $[into\ list]$
 - ▷ Collect values of *form* or *it* into *list*. If no *list* is given, collect into an anonymous list which is returned after termination.
- {append|appending|nconc|nconcing}** $\{form|it\}$ $[into\ list]$
 - ▷ Concatenate values of *form*, or *it*, which should be lists, into *list* by the means of **append** or **nconc**, respectively. If no *list* is given, collect into an anonymous list which is returned after termination.
- {count|counting}** $\{form|it\}$ $[into\ n]$ $[type]$
 - ▷ Count the number of times the value of *form* or of *it* is T. If no *n* is given, count into an anonymous variable which is returned after termination.
- {sum|summing}** $\{form|it\}$ $[into\ sum]$ $[type]$
 - ▷ Calculate the sum of the primary values of *form* or of *it*. If no *sum* is given, sum into an anonymous variable which is returned after termination.
- {maximize|maximizing|minimize|minimizing}** $\{form|it\}$ $[into\ max-min]$ $[type]$
 - ▷ Determine the maximum or minimum, respectively, of the primary values of *form* or of *it*. If no *max-min* is given, use an anonymous variable which is returned after termination.
- {initially|finally}** $form^+$
 - ▷ Evaluate *forms* before begin, or after end, respectively, of iterations.
- repeat** *num*
 - ▷ Terminate **loop** after *num* iterations; *num* is evaluated once.
- {while|until}** *test*
 - ▷ Continue iteration until *test* returns NIL or T, respectively.
- {always|never}** *test*
 - ▷ Terminate **loop** returning NIL and skipping any **finally** parts as soon as *test* is NIL or T, respectively. Otherwise continue **loop** with its default return value set to T.
- thereis** *test*
 - ▷ Terminate **loop** when *test* is T and return value of *test*, skipping any **finally** parts. Otherwise continue **loop** with its default return value set to NIL.
- (loop-finish)**
 - ▷ Terminate **loop** immediately executing any **finally** clauses and returning any accumulated results.

10 CLOS

10.1 Classes

- (slot-exists-p** *foo bar*) ▷ T if *foo* has a slot *bar*.
- (slot-boundp** *instance slot*) ▷ T if *slot* in *instance* is bound.
- (defclass** *foo* (*superclass** standard-object)

▷ Define, as a subclass of *superclasses*, class *foo*. In a new instance *i*, a *slot*'s value defaults to *form* unless set via *initarg-name*; it is readable via (*reader i*) or (*accessor i*), and writeable via (*writer i value*) or (**setf** (*accessor i*) *value*). With **:allocation** **:class**, *slot* is shared by all instances of class *foo*.

^M(with-simple-restart ($\left\{ \begin{array}{l} \text{restart} \\ \text{NIL} \end{array} \right\}$ control arg*) form^{R*})

▷ Return values of forms unless restart is called during their evaluation. In this case, describe restart using ^{Fu}format control and args (see p. 34) and return NIL and T.

^M(restart-case form (foo (ord-λ*)) $\left\{ \begin{array}{l} \text{:interactive } \text{arg-function} \\ \text{:report } \left\{ \begin{array}{l} \text{report-function} \\ \text{string}^{\text{m}_{\text{foo}}} \end{array} \right\} \\ \text{:test } \text{test-function}^{\text{m}} \end{array} \right\}$)

(declare $\widehat{\text{decl}}^*$)^{R*} restart-form^{R*})

▷ Evaluate form with dynamically established restarts foo. Return values of form or, if by (invoke-restarts foo arg*) one restart foo is called, use string or report-function (of a stream) to print a description of restart foo and return the values of its restart-forms. arg-function supplies appropriate args if foo is called by invoke-restart-interactively. If (test-function condition) returns T, foo is made visible under condition. For (ord-λ*) see p. 16.

^M(restart-bind ($\left\{ \begin{array}{l} \text{restart} \\ \text{NIL} \end{array} \right\}$ restart-function

$\left\{ \begin{array}{l} \text{:interactive-function } \text{function} \\ \text{:report-function } \text{function} \\ \text{:test-function } \text{function} \end{array} \right\}^*$) form^{R*})

▷ Return values of forms evaluated with restarts dynamically bound to restart-functions.

^{Fu}(invoke-restart restart arg*)

^{Fu}(invoke-restart-interactively restart)

▷ Call function associated with restart with arguments given or prompted for, respectively. If restart function returns, return its values.

$\left\{ \begin{array}{l} \text{compute-restarts} \\ \text{find-restart } \text{name} \end{array} \right\}$ [condition]

▷ Return list of all restarts, or innermost restart name, respectively, out of those either associated with condition or un-associated at all; or, without condition, out of all restarts. Return NIL if search is unsuccessful.

^{Fu}(restart-name restart) ▷ Name of restart.

$\left\{ \begin{array}{l} \text{abort} \\ \text{muffle-warning} \\ \text{continue} \\ \text{store-value } \text{value} \\ \text{use-value } \text{value} \end{array} \right\}$ [condition^m]

▷ Transfer control to innermost applicable restart with same name (i.e. abort, ..., continue ...) out of those either associated with condition or un-associated at all; or, without condition, out of all restarts. If no restart is found, signal control-error for ^{Fu}abort and ^{Fu}muffle-warning, or return NIL for the rest.

^M(with-condition-restarts condition restarts form^{R*})

▷ Evaluate forms with restarts dynamically associated with condition. Return values of forms.

^{Fu}(arithmetic-error-operation condition)

^{Fu}(arithmetic-error-operands condition)

▷ List of function or of its operands respectively, used in the operation which caused condition.

^{Fu}(cell-error-name condition)

▷ Name of cell which caused condition.

^{Fu}(unbound-slot-instance condition)

▷ Instance with unbound slot which caused condition.

^{Fu}(print-not-readable-object condition)

▷ The object not readably printable under condition.

^{Fu}(package-error-package condition)

^{Fu}(file-error-pathname condition)

^{Fu}(stream-error-stream condition)

▷ Package, path, or stream, respectively, which caused the condition of indicated type.

$\left\{ \begin{array}{l} \text{:argument-precedence-order } \text{required-var}^+ \\ \text{:declare } (\text{optimize } \text{arg}^*)^+ \\ \text{:documentation } \text{string} \\ \text{:generic-function-class } \text{class}^{\text{standard-generic-function}} \\ \text{:method-class } \text{class}^{\text{standard-method}} \\ \text{:method-combination } \text{c-type}^{\text{standard}} \text{ c-arg}^* \\ \text{:method } \text{defmethod-args}^* \end{array} \right\}$

▷ Define generic function foo. defmethod-args resemble those of defmethod. For c-type see section 10.3.

^{Fu}(ensure-generic-function $\left\{ \begin{array}{l} \text{foo} \\ \text{(setf foo)} \end{array} \right\}$)

$\left\{ \begin{array}{l} \text{:argument-precedence-order } \text{required-var}^+ \\ \text{:declare } (\text{optimize } \text{arg}^*)^+ \\ \text{:documentation } \text{string} \\ \text{:generic-function-class } \text{class} \\ \text{:method-class } \text{class} \\ \text{:method-combination } \text{c-type } \text{c-arg}^* \\ \text{:lambda-list } \text{lambda-list} \\ \text{:environment } \text{environment} \end{array} \right\}$

▷ Define or modify generic function foo. :generic-function-class and :lambda-list have to be compatible with a pre-existing generic function or with existing methods, respectively. Changes to :method-class do not propagate to existing methods. For c-type see section 10.3.

^M(defmethod $\left\{ \begin{array}{l} \text{foo} \\ \text{(setf foo)} \end{array} \right\}$ $\left[\begin{array}{l} \text{:before} \\ \text{:after} \\ \text{:around} \end{array} \right\} \left\{ \begin{array}{l} \text{primary method} \\ \text{qualifier}^* \end{array} \right\}$)

$\left(\begin{array}{l} \text{var} \\ \text{(spec-var } \left\{ \begin{array}{l} \text{class} \\ \text{(eql bar)} \end{array} \right\})^* \end{array} \right) \left[\text{\&optional} \right]$
 $\left(\begin{array}{l} \text{var} \\ \text{(var [init [supplied-p]])} \end{array} \right) \left[\text{\&rest var} \right] \left[\text{\&key} \right]$
 $\left(\begin{array}{l} \text{var} \\ \text{(var [init [supplied-p]])} \end{array} \right) \left[\text{\&allow-other-keys} \right]$
 $\left[\text{\&aux } \left(\begin{array}{l} \text{var} \\ \text{(var [init])} \end{array} \right)^* \right] \left\{ \begin{array}{l} (\text{declare } \widehat{\text{decl}}^*)^* \\ \text{doc} \end{array} \right\} \text{form}^{\text{R}^*}$

▷ Define new method for generic function foo. spec-vars specialize to either being of class or being eql bar, respectively. On invocation, vars and spec-vars of the new method act like parameters of a function with body form*. forms are enclosed in an implicit ^{Fu}block foo. Applicable qualifiers depend on the method-combination type; see section 10.3.

$\left\{ \begin{array}{l} \text{add-method} \\ \text{remove-method} \end{array} \right\}^{\text{GF}}$ generic-function method)

▷ Add (if necessary) or remove (if any) method to/from generic-function.

^{GF}(find-method generic-function qualifiers specializers [error^m])

▷ Return suitable method, or signal error.

^{GF}(compute-applicable-methods generic-function args)

▷ List of methods suitable for args, most specific first.

^{Fu}(call-next-method arg* current args)

▷ From within a method, call next method with args; return its values.

^{GF}(no-applicable-method generic-function arg*)

▷ Called on invocation of generic-function on args if there is no applicable method. Default method signals error.

$\left\{ \begin{array}{l} \text{invalid-method-error } \text{method} \\ \text{method-combination-error} \end{array} \right\}^{\text{Fu}}$ control arg*)

▷ Signal error on applicable method with invalid qualifiers, or on method combination. For control and args see format, p. 34.

^{GF}(no-next-method generic-function method arg*)

▷ Called on invocation of call-next-method when there is no next method. Default method signals error.

(^Ffunction-keywords *method*)

▷ Return list of keyword parameters of *method* and $\frac{T}{2}$ if other keys are allowed.

(^Fmethod-qualifiers *method*)

▷ List of qualifiers of *method*.

10.3 Method Combination Types

standard

▷ Evaluate most specific **:around** method supplying the values of the generic function. From within this method, **call-next-method** can call less specific **:around** methods if there are any. If not, or if there are no **:around** methods at all, call all **:before** methods, most specific first, and the most specific primary method which supplies the values of the calling **call-next-method** if any, or of the generic function; and which can call less specific primary methods via **call-next-method**. After its return, call all **:after** methods, least specific first.

and|or|append|list|nconc|progn|max|min|+

▷ Simple built-in **method-combination** types; have the same usage as the *c-types* defined by the short form of **define-method-combination**.

(^Mdefine-method-combination *c-type*

{
 :**documentation** string
 :**identity-with-one-argument** bool_{NIL}
 :**operator** operator_{*c-type*}
}

▷ **Short Form.** Define new **method-combination** *c-type*. In a generic function using *c-type*, evaluate most specific **:around** method supplying the values of the generic function. From within this method, **call-next-method** can call less specific **:around** methods if there are any. If not, or if there are no **:around** methods at all, have generic function applied to *gen-arg** return with the values of (*c-type* {*primary-method* *gen-arg**}^{*}), leftmost *primary-method* being the most specific. In **defmethod**, primary methods are denoted by the *qualifier c-type*.

(^Mdefine-method-combination *c-type* (*ord-λ**) ((*group*

{
 *
 (*qualifier** [***])
 predicate
 :**description** *control*
 :**order** {:**most-specific-first** {:**most-specific-first**}^{*}}
 :**required** *bool*
 {:**arguments** *method-combination-λ**}
 {:**generic-function** *symbol*}
 {:**declare** *decl**}^{*}
 doc
} *body**^P)

▷ **Long Form.** Define new **method-combination** *c-type*. A call to a generic function using *c-type* will be equivalent to a call to the forms returned by *body** with *ord-λ** bound to *c-arg** (cf. **defgeneric**), with *symbol* bound to the generic function, with *method-combination-λ** bound to the arguments of the generic function, and with *groups* bound to lists of methods. An applicable method becomes a member of the leftmost *group* whose *predicate* or *qualifiers* match. Methods can be called via **call-method**. Lambda lists (*ord-λ**) and (*method-combination-λ**) according to *ord-λ* on p. 16, the latter enhanced by an optional **&whole** argument.

(^Mcall-method {*method* {^Mmake-method *form*} } [(^Mnext-method {^Mmake-method *form*}^{*})]])

▷ From within an effective method form, call *method* with the arguments of the generic function and with information about its *next-methods*; return its values.

11 Conditions and Errors

(^Mdefine-condition *foo* (*parent-type** condition)

{
 slot
 {:**reader** *reader**}
 {:**writer** {*writer* {**self** *writer*}^{*}}
 {:**accessor** *accessor**}
 :**allocation** {:**instance** {:**class** {:**instance**}
 :**initarg** *initarg-name**}
 :**initform** *form*
 :**type** *type*
 :**documentation** *slot-doc*
} }
{:**default-initargs** {*name value**}
:**documentation** *condition-doc*
:**report** {*string* *report-function*}
}

▷ Define, as a subtype of *parent-types*, condition type *foo*. In a new condition, a *slot*'s value defaults to *form* unless set via *initarg-name*; it is readable via (*reader i*) or (*accessor i*), and writeable via (*writer i value*) or (**self** (*accessor i value*)). With **:allocation :class**, *slot* is shared by all conditions of type *foo*. A condition is reported by *string* or *report-function* of arguments condition and stream.

(^{Fu}make-condition *type* {:**initarg-name** *value**}^{*})

▷ Return new condition of *type*.

{^{Fu}signal {^{Fu}warn {^{Fu}error {
 condition
 type {:**initarg-name** *value**}^{*}
 *control arg**
}

▷ Unless handled, signal as **condition**, **warning** or **error**, respectively, *condition* or a new condition of *type* or, with **format** *control* and *args* (see p. 34), **simple-condition**, **simple-warning**, or **simple-error**, respectively. From **signal** and **warn**, return NIL.

(^{Fu}error *continue-control* {*condition* *continue-arg**
 type {:**initarg-name** *value**}^{*}
 *control arg**
})

▷ Unless handled, signal as correctable **error** *condition* or a new condition of *type* or, with **format** *control* and *args* (see p. 34), **simple-error**. In the debugger, use **format** arguments *continue-control* and *continue-args* to tag the continue option. Return NIL.

(^Mignore-errors *form**^P)

▷ Return values of forms or, in case of **errors**, NIL and the condition.

(^{Fu}invoke-debugger *condition*)

▷ Invoke debugger with *condition*.

(^Massert *test* [(*place**) [*condition* *continue-arg**
 type {:**initarg-name** *value**}^{*}
 *control arg**
]]])

▷ If *test*, which may depend on *places*, returns NIL, signal as correctable **error** *condition* or a new condition of *type* or, with **format** *control* and *args* (see p. 34), **error**. When using the debugger's continue option, *places* can be altered before re-evaluation of *test*. Return NIL.

(^Mhandler-case *test* (*type* [*var*]) (**declare** *decl**)^{*} *condition-form**^P)
 [(**no-error** (*ord-λ**) (**declare** *decl**)^{*} *form**)^P]]])

▷ If, on evaluation of *test*, a condition of *type* is signalled, evaluate matching *condition-forms* with *var* bound to the condition, and return their values. Without a condition, bind *ord-λs* to values of *test* and return values of forms or, without a **:no-error** clause, return values of test. See p. 16 for (*ord-λ**).

(^Mhandler-bind ((*condition-type* *handler-function*)^{*}) *form**^P)

▷ Return values of forms after evaluating them with *condition-types* dynamically bound to their respective *handler-functions* of argument condition.

#+feature *when-feature*
#-feature *unless-feature*
 ▷ Means *when-feature* if *feature* is **T**, means *unless-feature* if *feature* is **NIL**. *feature* is a symbol from ***features***, or (**{and|or}** *feature**), or (**not** *feature*).

features
 ▷ List of symbols denoting implementation-dependent features.

|c*|; **\c**
 ▷ Treat arbitrary character(s) *c* as alphabetic preserving case.

12.4 Printer

(^{Fu}prin1 *foo* [*stream* ***standard-output***])
(^{Fu}print *foo* [*stream* ***standard-output***])
(^{Fu}pprint *foo* [*stream* ***standard-output***])
(^{Fu}princ *foo* [*stream* ***standard-output***])

▷ Print *foo* to *stream* ^{Fu}readably, ^{Fu}readably between a newline and a space, ^{Fu}readably after a newline, or human-readably without any extra characters, respectively. **prin1**, **print** and **princ** return *foo*.

(^{Fu}prin1-to-string *foo*)

(^{Fu}princ-to-string *foo*)

▷ Print *foo* to *string* ^{Fu}readably or human-readably, respectively.

(^{Fu}print-object *object* *stream*)

▷ Print *object* to *stream*. Called by the Lisp printer.

(^Mprint-unreadable-object (*foo* *stream* **{:type** *bool*_{NIL} **:identity** *bool*_{NIL}}) *form*^{Pk})

▷ Enclosed in **#<** and **>**, print *foo* by means of *forms* to *stream*. Return **NIL**.

(^{Fu}terpri [*stream* ***standard-output***])

▷ Output a newline to *stream*. Return **NIL**.

(^{Fu}fresh-line [*stream* ***standard-output***])

▷ Output a newline to *stream* and return **T** unless *stream* is already at the start of a line.

(^{Fu}write-char *char* [*stream* ***standard-output***])

▷ Output *char* to *stream*.

(^{Fu}write-string *string* [*stream* ***standard-output*** **{:start** *start*₀ **:end** *end*_{NIL}}]])
(^{Fu}write-line *string* [*stream* ***standard-output*** **{:start** *start*₀ **:end** *end*_{NIL}}]])

▷ Write *string* to *stream* without/with a trailing newline.

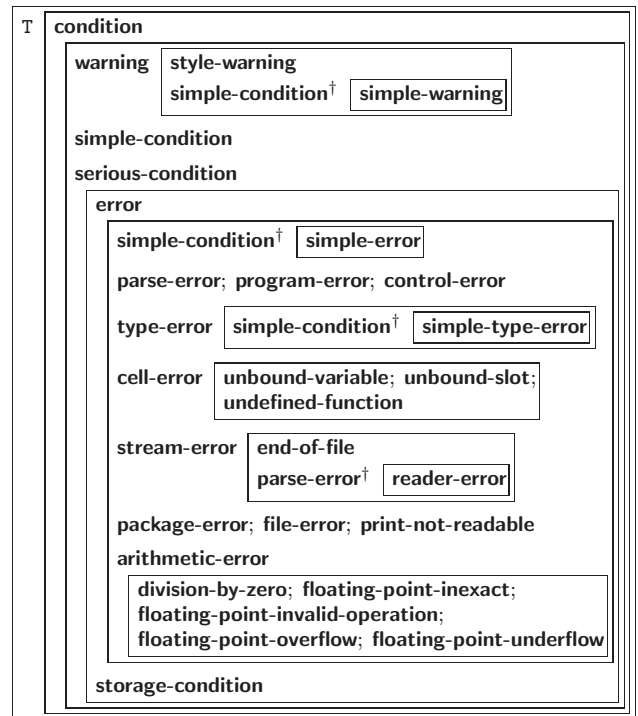

(^{Fu}write-byte *byte* *stream*)

▷ Write *byte* to binary *stream*.

(^{Fu}write-sequence *sequence* *stream* **{:start** *start*₀ **:end** *end*_{NIL}})

▷ Write elements of *sequence* to *stream*.

(^{Fu}write *foo* **{**
:array *bool*
:base *radix*
:case **{**
:upcase
:downcase
:capitalize
}
:circle *bool*
:escape *bool*
:gensym *bool*
:length **{***int*_{NIL}**}**
:level **{***int*_{NIL}**}**
:lines **{***int*_{NIL}**}**
:miser-width **{***int*_{NIL}**}**
:pprint-dispatch *dispatch-table*
:pretty *bool*
:radix *bool*
:readably *bool*
:right-margin **{***int*_{NIL}**}**
:stream *stream* ***standard-output***
}

†For supertypes of this type look for the instance without a †.

Figure 2: Condition Types.

(^{Fu}type-error-datum *condition*)

(^{Fu}type-error-expected-type *condition*)

▷ Object which caused *condition* of type **type-error**, or its expected type, respectively.

(^{Fu}simple-condition-format-control *condition*)

(^{Fu}simple-condition-format-arguments *condition*)

▷ Return ^{Fu}format control or list of ^{Fu}format arguments, respectively, of *condition*.

break-on-signals_{NIL}

▷ Condition type debugger is to be invoked on.

debugger-hook_{NIL}

▷ Function of condition and function itself. Called before debugger.

12 Input/Output

12.1 Predicates

(^{Fu}streamp *foo*)

(^{Fu}pathnamep *foo*)

▷ **T** if *foo* is of indicated type.

(^{Fu}readablep *foo*)

(^{Fu}input-stream-p *stream*)

(^{Fu}output-stream-p *stream*)

(^{Fu}interactive-stream-p *stream*)

(^{Fu}open-stream-p *stream*)

▷ Return **T** if *stream* is for input, for output, interactive, or open, respectively.

(^{Fu}pathname-match-p *path* *wildcard*)

▷ **T** if *path* matches *wildcard*.

(^{Fu}wild-pathname-p *path* **{:host|:device|:directory|:name|:type|**

:version_{NIL}})

▷ Return **T** if indicated component in *path* is wildcard. (**NIL** indicates any component.)

12.2 Reader

$\left\{ \begin{array}{l} \text{y-or-n-p} \\ \text{yes-or-no-p} \end{array} \right\}$ [*control arg**])

▷ Ask user a question and return T or NIL depending on their answer. See p. 34, format, for *control* and *args*.

(with-standard-io-syntax *form**)

▷ Evaluate *forms* with standard behaviour of reader and printer. Return values of forms.

$\left\{ \begin{array}{l} \text{read} \\ \text{read-preserving-whitespace} \end{array} \right\}$ [*stream* *standard-input* [*eof-err*] [*eof-val*] [*recursive*]]]

▷ Read printed representation of object.

(read-from-string *string* [*eof-error*] [*eof-val*] [$\left\{ \begin{array}{l} \text{:start } \textit{start} \\ \text{:end } \textit{end} \\ \text{:preserve-whitespace } \textit{bool} \end{array} \right\}$]]])

▷ Return object read from string and zero-indexed position of next character.

(read-delimited-list *char* [*stream* *standard-input* [*recursive*]]])

▷ Continue reading until encountering *char*. Return list of objects read. Signal error if no *char* is found in stream.

(read-char [*stream* *standard-input* [*eof-err*] [*eof-val*] [*recursive*]]])

▷ Return next character from *stream*.

(read-char-no-hang [*stream* *standard-input* [*eof-error*] [*eof-val*] [*recursive*]]])

▷ Next character from *stream* or NIL if none is available.

(peek-char [*mode*] [*stream* *standard-input* [*eof-error*] [*eof-val*] [*recursive*]]])

▷ Next, or if *mode* is T, next non-whitespace character, or if *mode* is a character, next instance of it, from stream without removing it there.

(unread-char *character* [*stream* *standard-input*])

▷ Put last read-chared *character* back into *stream*; return NIL.

(read-byte *stream* [*eof-err*] [*eof-val*])

▷ Read next byte from binary *stream*.

(read-line [*stream* *standard-input* [*eof-err*] [*eof-val*] [*recursive*]]])

▷ Return a line of text from *stream* and T if line has been ended by end of file.

(read-sequence *sequence* *stream* [*:start* *start*] [*:end* *end*])

▷ Replace elements of *sequence* between *start* and *end* with elements from *stream*. Return index of *sequence*'s first unmodified element.

(readtable-case *readtable* upcase)

▷ Case sensitivity attribute (one of upcase, downcase, preserve, invert) of *readtable*. setfable.

(copy-readtable [*from-readtable* *readtable* [*to-readtable*]])

▷ Return copy of from-readtable.

(set-syntax-from-char *to-char* *from-char* [*to-readtable* *readtable* [*from-readtable* standard-readtable]])

▷ Copy syntax of *from-char* to *to-readtable*. Return T.

readtable ▷ Current readtable.

read-base ▷ Radix for reading integers and ratios.

read-default-float-format single-float

▷ Floating point format to use when not indicated in the number read.

read-suppress nil

▷ If T, reader is syntactically more tolerant.

(set-macro-character *char* *function* [*non-term-p*] [*rt* *readtable*])

▷ Make *char* a macro character associated with *function*. Return T.

(get-macro-character *char* [*rt* *readtable*])

▷ Reader macro function associated with *char*, and T if *char* is a non-terminating macro character.

(make-dispatch-macro-character *char* [*non-term-p*] [*rt* *readtable*])

▷ Make *char* a dispatching macro character. Return T.

(set-dispatch-macro-character *char* *sub-char* *function* [*rt* *readtable*])

▷ Make *function* a dispatch function of *char* followed by *sub-char*. Return T.

(get-dispatch-macro-character *char* *sub-char* [*rt* *readtable*])

▷ Dispatch function associated with *char* followed by *sub-char*.

12.3 Macro Characters and Escapes

#| *multi-line-comment* * |#

; *one-line-comment* *

▷ Comments. There are conventions:

;;; *title* ▷ Short title for a block of code.
;;; *intro* ▷ Description before a block of code.
:: *state* ▷ State of program or of following code.
; *explanation* ▷ Regarding line on which it appears.

(▷ Initiate reading of a list.

" ▷ Begin and end of a string.

'*foo* ▷ (quote *foo*); *foo* unevaluated

`([*foo*] [*bar*] [*@baz*] [*quux*] [*bing*])

▷ Backquote. quote *foo* and *bing*; evaluate *bar* and splice the lists *baz* and *quux* into their elements. When nested, outermost commas inside the innermost backquote expression belong to this backquote.

#\c ▷ (character "c"), the character *c*.

#B; #O; #X; #nR ▷ Number of radix 2, 8, 16, or *n*.

#C(a b) ▷ (complex *a b*), the complex number $a + bi$.

#'foo ▷ (function *foo*); the function named *foo*.

#nAsequence ▷ *n*-dimensional array.

#[n](foo*)

▷ Vector of some (or *n*) *foos* filled with last *foo* if necessary.

#[n]*b*

▷ Bit vector of some (or *n*) *bs* filled with last *b* if necessary.

#S(type {slot value}*) ▷ Structure of *type*.

#Pstring ▷ A pathname.

#:foo ▷ Uninterned symbol *foo*.

#.form ▷ Read-time value of *form*.

read-eval ▷ If NIL, a reader-error is signalled by #.

#int= foo ▷ Give *foo* the label *int*.

#int# ▷ Object labelled *int*.

#< ▷ Have the reader signal reader-error.

▷ **Conditional Expression.** The *texts* are format control subclauses the zero-indexed argument (or the *i*th if given) of which is chosen. With **:**, the argument is boolean and takes first *text* for NIL and second *text* for T. With **@**, the argument is boolean and if T, takes the only *text* and remains to be read; no *text* is chosen and the argument is used up if it is NIL.

~[**@**?

▷ **Recursive Processing.** Process two arguments as **format** string and argument list. With **@**, take one argument as **format** string and use then the rest of the original arguments.

~[*prefix*{, *prefix**}[**:**][**@**]/*function*/

▷ **Call Function.** Call *function* with the arguments *stream*, *format-argument*, *colon-p*, *at-sign-p* and *prefixes* for printing *format-argument*.

~[**:**][**@**W

▷ **Write.** Print argument of any type obeying every printer control variable. With **:**, pretty-print. With **@**, print without limits on length or depth.

{**V**/#}

▷ In place of the comma-separated prefix parameters: use next argument or number of remaining unprocessed arguments, respectively.

12.6 Streams

(^{Fu}open *path* {

| | | | |
|--------------------|----------------------------------|--------------------|---------|
| :direction | { | :input | } |
| | | :output | } |
| | | :io | {input} |
| | | :probe | } |
| :element-type | <i>type</i> _{character} | | |
| | :new-version | | |
| | :error | | |
| | :rename | | |
| :if-exists | { | :rename-and-delete | } |
| | | :overwrite | } |
| | | :append | } |
| | | :supersede | } |
| | | NIL | } |
| :if-does-not exist | { | :error | } |
| | | NIL | } |
| :external-format | <i>format</i> _{default} | | |

▷ Open **file-stream** to *path*.

(^{Fu}make-concatenated-stream *input-stream**)

(^{Fu}make-broadcast-stream *output-stream**)

(^{Fu}make-two-way-stream *input-stream-part* *output-stream-part*)

(^{Fu}make-echo-stream *from-input-stream* *to-output-stream*)

(^{Fu}make-synonym-stream *variable-bound-to-stream*)

▷ Return **stream** of indicated type.

(^{Fu}make-string-input-stream *string* [*start*₀] [*end*_{NIL}])

▷ Return a **string-stream** supplying the characters from *string*.

(^{Fu}make-string-output-stream [*element-type* *type*_{character}])

▷ Return a **string-stream** accepting characters (available via **get-output-stream-string**).

(^{Fu}concatenated-stream-streams *concatenated-stream*)

(^{Fu}broadcast-stream-streams *broadcast-stream*)

▷ Return list of **streams** *concatenated-stream* still has to read from/*broadcast-stream* is broadcasting to.

(^{Fu}two-way-stream-input-stream *two-way-stream*)

(^{Fu}two-way-stream-output-stream *two-way-stream*)

(^{Fu}echo-stream-input-stream *echo-stream*)

(^{Fu}echo-stream-output-stream *echo-stream*)

▷ Return source **stream** or **sink stream** of *two-way-stream*/*echo-stream*, respectively.

(^{Fu}synonym-stream-symbol *synonym-stream*)

▷ Return **symbol** of *synonym-stream*.

▷ Print *foo* to *stream* and return *foo*, or print *foo* into **string**, respectively, after dynamically setting printer variables corresponding to keyword parameters (***print-bar*** becoming **:bar**). (**:stream** keyword with **write** only.)

(^{Fu}pprint-fill *stream* *foo* [*parenthesis*₀] [*noop*])

(^{Fu}pprint-tabular *stream* *foo* [*parenthesis*₀] [*noop*] [*n*₀])

(^{Fu}pprint-linear *stream* *foo* [*parenthesis*₀] [*noop*])

▷ Print *foo* to *stream*. If *foo* is a list, print as many elements per line as possible; do the same in a table with a column width of *n* ems; or print either all elements on one line or each on its own line, respectively. Return **NIL**. Usable with **format** directive **~//**.

(^Mpprint-logical-block (*stream* *list* { {**:prefix** *string*
:per-line-prefix *string*
:suffix *string*₀ } })

(**declare** *decl**)* *form*_R*

▷ Evaluate *forms*, which should print *list*, with *stream* locally bound to a pretty printing stream which outputs to the original *stream*. If *list* is in fact not a list, it is printed by **write**. Return **NIL**.

(^Mpprint-pop)

▷ Take **next element** off *list*. If there is no remaining tail of *list*, or ***print-length*** or ***print-circle*** indicate printing should end, send element together with an appropriate indicator to *stream*.

(^{Fu}pprint-tab {**:line**
:line-relative
:section
:section-relative } *c* *i* [*stream*_{var}] [*standard-outputs*])

▷ Move cursor forward to column number $c + ki$, $k \geq 0$ being as small as possible.

(^{Fu}pprint-indent {**:block**
:current } *n* [*stream*_{var}] [*standard-outputs*])

▷ Specify indentation for innermost logical block relative to leftmost position/to current position. Return **NIL**.

(^Mpprint-exit-if-list-exhausted)

▷ If *list* is empty, terminate logical block. Return **NIL** otherwise.

(^{Fu}pprint-newline {**:linear**
:fill
:miser
:mandatory } [*stream*_{var}] [*standard-outputs*])

▷ Print a conditional newline if *stream* is a pretty printing stream. Return **NIL**.

^{var.}***print-array*** ▷ If T, print arrays **readably**.

^{var.}***print-base***₁₀ ▷ Radix for printing rationals, from 2 to 36.

^{var.}***print-case***_{cupcase}

▷ Print symbol names all uppercase (**:upcase**), all lowercase (**:downcase**), capitalized (**:capitalize**).

^{var.}***print-circle***_{NIL}

▷ If T, avoid indefinite recursion while printing circular structure.

^{var.}***print-escape***₀

▷ If NIL, do not print escape characters and package prefixes.

^{var.}***print-gensym***₀

▷ If T, print **#:** before uninterned symbols.

^{var.}***print-length***_{NIL}

^{var.}***print-level***_{NIL}

^{var.}***print-lines***_{NIL}

▷ If integer, restrict printing of objects to that number of elements per level/to that depth/to that number of lines.

^{var.}***print-miser-width***

▷ Width below which a compact pretty-printing style is used.

print-pretty \triangleright If T, print pretty.

print-radix_{NIL} \triangleright If T, print rationals with a radix indicator.

print-readably_{NIL} \triangleright If T, print **readably** or signal error **print-not-readable**.

print-right-margin_{NIL} \triangleright Right margin width in ems while pretty-printing.

(set-pprint-dispatch *type function* [*priority*]_{table} ***print-pprint-dispatch***)
 \triangleright Install entry comprising *function* of arguments stream and object to print; and *priority* as *type* into *table*. If *function* is NIL, remove *type* from *table*. Return NIL.

(pprint-dispatch *foo* [*table* ***print-pprint-dispatch***])
 \triangleright Return highest priority *function* associated with type of *foo* and T if there was a matching type specifier in *table*.

(copy-pprint-dispatch [*table* ***print-pprint-dispatch***])
 \triangleright Return *copy* of *table* or, if *table* is NIL, initial value of ***print-pprint-dispatch***.

print-pprint-dispatch \triangleright Current pretty print dispatch table.

12.5 Format

(formatter *control*)
 \triangleright Return *function* of stream and a **&rest** argument applying **format** to stream, *control*, and the **&rest** argument returning NIL or any excess arguments.

(format {T|NIL|*out-string*|*out-stream*} *control* *arg**)
 \triangleright Output string *control* which may contain ~ directives possibly taking some *args*. Alternatively, *control* can be a function returned by **formatter** which is then applied to *out-stream* and *arg**. Output to *out-string*, *out-stream* or, if first argument is T, to ***standard-output***. Return NIL. If first argument is NIL, return *formatted output*.

\sim [*min-col*]₀ [*col-inc*]₀ [*min-pad*]₀ [*pad-char*]₀]]
[:][@]{A|S}
 \triangleright **Aesthetic/Standard**. Print argument of any type for consumption by humans/by the reader, respectively. With :, print NIL as () rather than nil; with @, add *pad-chars* on the left rather than on the right.

\sim [*radix*]₀ [*width*] [*pad-char*]₀ [*comma-char*]₀ [*comma-interval*]₀]] [:][@]R
 \triangleright **Radix**. (With one or more prefix arguments.) Print argument as number; with :, group digits *comma-interval* each; with @, always prepend a sign.

{~R|~:R|~@R|~@:R}
 \triangleright **Roman**. Take argument as number and print it as English cardinal number, as English ordinal number, as Roman numeral, or as old Roman numeral, respectively.

\sim [*width*] [*pad-char*]₀ [*comma-char*]₀ [*comma-interval*]₀]] [:][@]{D|B|O|X}
 \triangleright **Decimal/Binary/Octal/Hexadecimal**. Print integer argument as number. With : group digits *comma-interval* each; with @, always prepend a sign.

\sim [*width*] [*dec-digits*] [*shift*]₀ [*overflow-char*] [*pad-char*]₀]] [:][@]F
 \triangleright **Fixed-Format Floating-Point**. With @, always prepend a sign.

\sim [*width*] [*int-digits*] [*exp-digits*] [*scale-factor*]₀ [*overflow-char*] [*pad-char*]₀ [*exp-char*]₀]] [:][@]{E|G}
 \triangleright **Exponential/General Floating-Point**. Print argument as floating-point number with *int-digits* before decimal point and *exp-digits* in the signed exponent. With ~G, choose either ~E or ~F. With @, always prepend a sign.

\sim [*dec-digits*]₀ [*int-digits*]₀ [*width*]₀ [*pad-char*]₀]] [:][@]S
 \triangleright **Monetary Floating-Point**. Print argument as fixed-format floating-point number. With :, put sign before any padding; with @, always prepend a sign.

{~C|~:C|~@C|~@:C}
 \triangleright **Character**. Print, spell out, print in #\ syntax, or tell how to type, respectively, argument as (possibly non-printing) character.

{~(text~)|~:(text~)|~@ (text~)|~:@ (text~)}
 \triangleright **Case-Conversion**. Convert *text* to lowercase, convert first letter of each word to uppercase, capitalize first word and convert the rest to lowercase, or convert to uppercase, respectively.

{~P|~:P|~@P|~@:P}
 \triangleright **Plural**. If argument *eq* 1 print nothing, otherwise print *s*; do the same for the previous argument; if argument *eq* 1 print *y*, otherwise print *ies*; do the same for the previous argument, respectively.

\sim [*n*]₀% \triangleright **Newline**. Print *n* newlines.

\sim [*n*]₀&
 \triangleright **Fresh-Line**. Print *n* - 1 newlines if output stream is at the beginning of a line, or *n* newlines otherwise.

{~|~:|~@|~@:}
 \triangleright **Conditional Newline**. Print a newline like **pprint-newline** with argument **:linear**, **:fill**, **:miser**, or **:mandatory**, respectively.

\sim [:][@]↵
 \triangleright **Ignored Newline**. Ignore newline and following whitespace. With :, ignore only newline; with @, ignore only following whitespace.

\sim [*n*]₀|| \triangleright **Page**. Print *n* page separators.

\sim [*n*]₀~ \triangleright **Tilde**. Print *n* tildes.

\sim [*min-col*]₀ [*col-inc*]₀ [*min-pad*]₀ [*pad-char*]₀]] [:][@]< [*nl-text*~[*spare*]₀[*width*]]:] {*text*~;}**text* ~>
 \triangleright **Justification**. Justify text produced by *texts* in a field of at least *min-col* columns. With :, right justify; with @, left justify. If this would leave less than *spare* characters on the current line, output *nl-text* first.

\sim [:][@]< [{*prefix*~;}]{*per-line-prefix*~@;}
body [~; *suffix*~:]~[:][@]>
 \triangleright **Logical Block**. Act like **pprint-logical-block** using *body* as **format** control string on the elements of the list argument or, with @, on the remaining arguments, which are extracted by **pprint-pop**. With :, *prefix* and *suffix* default to (and). When closed by ~[:][@]>, spaces in *body* are replaced with conditional newlines.

{~[*n*]₀|~[*n*]₀:|~[*n*]₀@|~[*n*]₀@:}
 \triangleright **Indent**. Set indentation to *n* relative to leftmost/current position.

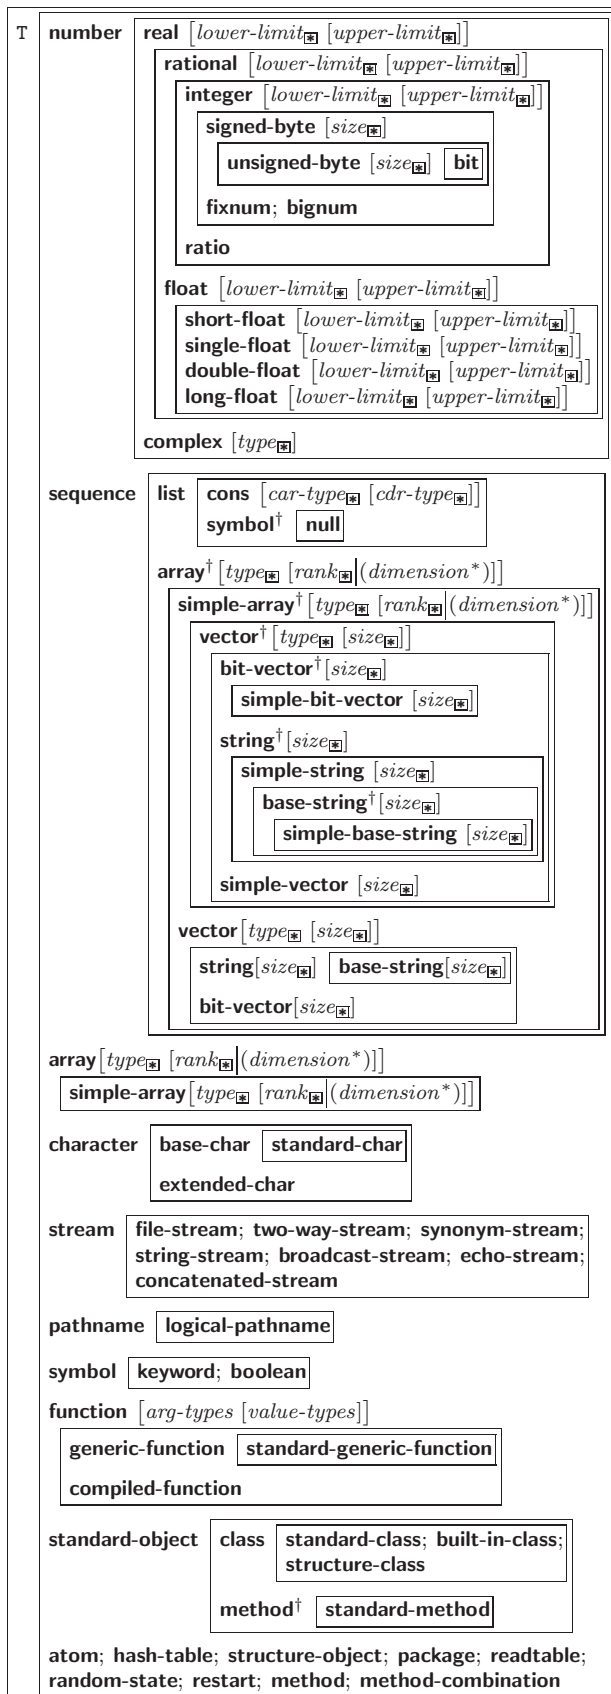

\sim [*c*]₀ [*i*]₀ [:][@]T
 \triangleright **Tabulate**. Move cursor forward to column number *c* + *ki*, *k* ≥ 0 being as small as possible. With :, calculate column numbers relative to the immediately enclosing section. With @, move to column number *c*₀ + *c* + *ki* where *c*₀ is the current position.

{~[*m*]₀*|~[*m*]₀:|~[*m*]₀@|~[*m*]₀@:}
 \triangleright **Go-To**. Jump *m* arguments forward, or backward, to argument *n*.

\sim [*limit*][:][@]{*text*~}
 \triangleright **Iteration**. *text* is used repeatedly, up to *limit*, as control string for the elements of the list argument or (with @) for the remaining arguments. With : or @, list elements or remaining arguments should be lists of which a new one is used at each iteration step.

\sim [*x* [*y* [*z*]] ^
 \triangleright **Escape Upward**. Leave immediately ~< ~>, ~< ~:, ~{ ~}, ~?, or the entire **format** operation. With one to three prefixes, act only if *x* = 0, *x* = *y*, or *x* ≤ *y* ≤ *z*, respectively.

\sim [*i*][:][@][[*text*~;]**text*][~; *default*]~]

[†] For supertypes of this type look for the instance without a [†].

As a type argument, * means no restriction.

Figure 3: Data Types.

(^{Fu}get-output-stream-string *string-stream*)
 ▷ Clear and return as a string characters on *string-stream*.

(^{Fu}listen [*stream* [^{var}*standard-input*]])
 ▷ T if there is a character in input *stream*.

(^{Fu}clear-input [*stream* [^{var}*standard-input*]])
 ▷ Clear input from *stream*, return NIL.

{^{Fu}clear-output
^{Fu}force-output
^{Fu}finish-output} [*stream* [^{var}*standard-output*]])
 ▷ End output to *stream* and return NIL immediately, after initiating flushing of buffers, or after flushing of buffers, respectively.

(^{Fu}close *stream* [:abort *bool*])
 ▷ Close *stream*. Return T if *stream* had been open. If :abort is T, delete associated file.

(^Mwith-open-stream (*foo stream*) (declare *decl*)* *form*^P*)
 ▷ Evaluate *forms* with *foo* locally bound to *stream*. Return values of *forms*.

(^Mwith-input-from-string (*foo string* { :index *index*
 :start *start*
 :end *end* }) (declare *decl*)* *form*^P*)
 ▷ Evaluate *forms* with *foo* locally bound to input string-stream from *string*. Return values of forms; store next reading position into *index*.

(^Mwith-output-to-string (*foo* [*string*] [:element-type *type* *character*]) (declare *decl*)* *form*^P*)
 ▷ Evaluate *forms* with *foo* locally bound to an output string-stream. Append output to *string* and return values of forms if *string* is given. Return string containing output otherwise.

(^{Fu}stream-external-format *stream*)
 ▷ External file format designator.

^{var}*terminal-io* ▷ Bidirectional stream to user terminal.

^{var}*standard-input*
^{var}*standard-output*
^{var}*error-output*
 ▷ Standard input stream, standard output stream, or standard error output stream, respectively.

^{var}*debug-io*
^{var}*query-io*
 ▷ Bidirectional streams for debugging and user interaction.

12.7 Files

(^{Fu}make-pathname { :host *host*
 :device *dev*
 :directory *dir*
 :name *name*
 :type *type*
 :version *ver*
 :defaults *path*
 :case { :local | :common } })
 ▷ Construct pathname.

(^{Fu}merge-pathnames *pathname* [*default-pathname* [^{var}*default-pathname-defaults*]
 [*default-version* [*newest*]])
 ▷ Return pathname after filling in missing parts from defaults.

^{var}*default-pathname-defaults*
 ▷ Pathname to use if one is needed and none supplied.

(^{Fu}pathname *path*) ▷ Pathname of *path*.

(^{Fu}**enough-namestring** *path* [*root-path* [*var* *default-pathname-defaults*]])
 ▷ Return minimal path string to sufficiently describe *path* relative to *root-path*.

(^{Fu}**namestring** *path*)

(^{Fu}**file-namestring** *path*)

(^{Fu}**directory-namestring** *path*)

(^{Fu}**host-namestring** *path*)

▷ Return string representing full pathname; name, type, and version; directory name; or host name, respectively, of *path*.

(^{Fu}**parse-namestring** *foo* [*host*

[*default-pathname* [*var* *default-pathname-defaults*]]
 {
 :start *start*₀
 :end *end*_{NI}
 :junk-allowed *bool*_{NI}
 }])

▷ Return pathname converted from string, pathname, or stream *foo*; and position where parsing stopped.

{
^{Fu}**pathname-host**
^{Fu}**pathname-device**
^{Fu}**pathname-directory**
^{Fu}**pathname-name**
^{Fu}**pathname-type**
^{Fu}**pathname-version** *path*
 } [*case* {
 :local
 :common
 } [*local*]])

▷ Return pathname component.

(^{Fu}**logical-pathname** *path*) ▷ Logical name of *path*.

(^{Fu}**translate-pathname** *path-a path-b path-c*)

▷ Translate *path-a* from wildcard *path-b* into wildcard *path-c*. Return new path.

(^{Fu}**logical-pathname-translations** *host*)

▷ *host*'s list of translations. setfable.

(^{Fu}**load-logical-pathname-translations** *host*)

▷ Load *host*'s translations. Return NIL if already loaded, return T if successful.

(^{Fu}**translate-logical-pathname** *path*)

▷ Physical pathname of *path*.

(^{Fu}**probe-file** *file*)

(^{Fu}**truename** *file*)

▷ Canonical name of *file*. If *file* does not exist, return NIL/signal file-error, respectively.

(^{Fu}**write-date** *file*) ▷ Time at which *file* was last written.

(^{Fu}**file-author** *file*) ▷ Return name of *file* owner.

(^{Fu}**file-length** *stream*) ▷ Return length of *stream*.

(^{Fu}**file-position** *stream* [{
 :start
 :end
 } [*position*]])

▷ Return position within stream, or set it to *position* and return T on success.

(^{Fu}**file-string-length** *stream foo*)

▷ Length *foo* would have in *stream*.

(^{Fu}**rename-file** *foo bar*)

▷ Rename file *foo* to *bar*. Unspecified parts of path *bar* default to those of *foo*. Return new pathname, old file name, and new file name.

(^{Fu}**delete-file** *file*) ▷ Delete *file*, return T.

(^{Fu}**directory** *path*) ▷ Return list of pathnames.

(^{Fu}**ensure-directories-exist** *path* [:verbose *bool*])

▷ Create parts of *path* if necessary. Second return value is T if something has been created.

(^M**with-open-file** (*stream path open-arg**) (**declare** *decl**) (*form^{Pk}*)

▷ Use **open** with *open-args* (cf. page 36) to temporarily create *stream* to *path*; return values of forms.

(^{Fu}**user-homedir-pathname** [*host*])

▷ User's home directory.

13 Types and Classes

For any class, there is always a corresponding type of the same name.

(^{Fu}**typep** *foo type* [*environment*_{NI}])

▷ Return T if *foo* is of *type*.

(^{Fu}**subtypep** *type-a type-b* [*environment*])

▷ Return T if *type-a* is a recognizable subtype of *type-b*, and NIL if the relationship could not be determined.

(^{So}**the** *type form*)

▷ Return values of *form* which are declared to be of *type*.

(^{Fu}**coerce** *object type*)

▷ Coerce *object* into *type*.

(^M**typecase** *foo* (*type a-form^{Pk}*)* [(**otherwise**) *b-form*_{NI}^{Pk}])

▷ Return values of the *a-forms* whose *type* is *foo* of. Return values of *b-forms* if no *type* matches.

{^M**ctypcase**
^M**etypcase**} *foo* (*type form^{Pk}*)*

▷ Return values of the forms whose *type* is *foo* of. Signal correctable/non-correctable error, respectively if no *type* matches.

(^{Fu}**type-of** *foo*)

▷ Type of *foo*.

(**check-type** *place type* [*string*])

▷ Return NIL and signal correctable **type-error** if *place* is not of *type*.

(^{Fu}**stream-element-type** *stream*) ▷ Return type of *stream* objects.

(^{Fu}**array-element-type** *array*)

▷ Element type *array* can hold.

(^{Fu}**upgraded-array-element-type** *type* [*environment*_{NI}])

▷ Element type of most specialized array capable of holding elements of *type*.

(^M**deftype** *foo* (*macro-λ**) (**declare** *decl**) [*doc*] *form^{Pk}*)

▷ Define type *foo* which when referenced as (*foo arg**) applies expanded *forms* to *args* returning the new type. For (*macro-λ**) see p. 18 but with default value of * instead of NIL. *forms* are enclosed in an implicit **block** *foo*.

(**eq** *foo*)

(**member** *foo**) ▷ Specifier for a type comprising *foo* or *foos*.

(**satisfies** *predicate*)

▷ Type specifier for all objects satisfying *predicate*.

(**mod** *n*)

▷ Type specifier for all non-negative integers < *n*.

(**not** *type*)

▷ Complement of type.

(**and** *type**_{NI})

▷ Type specifier for intersection of *types*.

(**or** *type**_{NI})

▷ Type specifier for union of *types*.

(**values** *type** [**&optional** *type** [**&rest** *other-args*]])

▷ Type specifier for multiple values.

(^{SO}locally (declare \widehat{decl}^*)^{*} $form^{\text{Pk}}$)
 ▷ Evaluate *forms* in a lexical environment with declarations *decl* in effect. Return values of forms.

(^Mwith-compilation-unit (^{Fu}[:override $bool_{\text{NIL}}$]) $form^{\text{Pk}}$)
 ▷ Return values of forms. Warnings deferred by the compiler until end of compilation are deferred until the end of evaluation of *forms*.

(^{SO}load-time-value $form$ [$\widehat{read-only}_{\text{NIL}}$])
 ▷ Evaluate *form* at compile time and treat its value as literal at run time.

(^{SO}quote \widehat{foo}) ▷ Return unevaluated foo.

(^{GF}make-load-form foo [*environment*])
 ▷ Its methods are to return a creation form which on evaluation at load time returns an object equivalent to *foo*, and an optional initialization form which on evaluation performs some initialization of the object.

(^{Fu}make-load-form-saving-slots foo {^{Fu}[:slot-names $slots_{\text{all local slots}}$]
 :environment *environment*})
 ▷ Return a creation form and an initialization form which on evaluation construct an object equivalent to *foo* with *slots* initialized with the corresponding values from *foo*.

(^{Fu}macro-function $symbol$ [*environment*])

(^{Fu}compiler-macro-function { $name$
 :setf $name$ }) [*environment*])
 ▷ Return specified macro function, or compiler macro function, respectively, if any. Return NIL otherwise. setfable.

(^{Fu}eval arg)
 ▷ Return values of value of arg evaluated in global environment.

15.3 REPL and Debugging

$\begin{array}{c} \text{var} \text{ var} \text{ var} \\ | \text{+} | \text{+} | \text{+} \\ \text{var} \text{ var} \text{ var} \\ | \text{*} | \text{*} | \text{*} \\ \text{var} \text{ var} \text{ var} \\ | \text{//} | \text{//} | \text{//} \end{array}$
 ▷ Last, penultimate, or antepenultimate form evaluated in the REPL, or their respective primary value, or a list of their respective values.

^{var} - ▷ Form currently being evaluated by the REPL.

(^{Fu}apropos $string$ [$package_{\text{NIL}}$])
 ▷ Print interned symbols containing *string*.

(^{Fu}apropos-list $string$ [$package_{\text{NIL}}$])
 ▷ List of interned symbols containing *string*.

(^{Fu}dribble [*path*])
 ▷ Save a record of interactive session to file at *path*. Without *path*, close that file.

(^{Fu}ed [$file-or-function_{\text{NIL}}$]) ▷ Invoke editor if possible.

{^{Fu}macroexpand-1
 macroexpand} $form$ [$environment_{\text{NIL}}$])
 ▷ Return macro expansion, once or entirely, respectively, of *form* and T if *form* was a macro form. Return form and NIL otherwise.

^{var} *macroexpand-hook*
 ▷ Function of arguments expansion function, macro form, and environment called by ^{Fu}macroexpand-1 to generate macro expansions.

(^Mtrace { $function$
 :setf $function$ })^{*}
 ▷ Cause *functions* to be traced. With no arguments, return list of traced functions.

14 Packages and Symbols

14.1 Predicates

(^{Fu}symbolp foo)
 (^{Fu}packagep foo) ▷ T if *foo* is of indicated type.
 (^{Fu}keywordp foo)

14.2 Packages

:bar|keyword:bar ▷ Keyword, evaluates to :bar.

package:symbol ▷ Exported *symbol* of *package*.

package::symbol ▷ Possibly unexported *symbol* of *package*.

(^Mdefpackage foo {
 (:nicknames $nick^*$)^{*}
 (:documentation $string$)
 (:intern $interned-symbol^*$)^{*}
 (:use $used-package^*$)^{*}
 (:import-from pkg $imported-symbol^*$)^{*}
 (:shadowing-import-from pkg $shd-symbol^*$)^{*}
 (:shadow $shd-symbol^*$)^{*}
 (:export $exported-symbol^*$)^{*}
 (:size int)
 })

▷ Create or modify package foo with *interned-symbols*, symbols from *used-packages*, *imported-symbols*, and *shd-symbols*. Add *shd-symbols* to *foo*'s shadowing list.

(^{Fu}make-package foo {^{Fu}:nicknames ($nick^*$)_{NIL}
 :use ($used-package^*$)
 })

▷ Create package foo.

(^{Fu}rename-package $package$ $new-name$ [$new-nicknames_{\text{NIL}}$])
 ▷ Rename *package*. Return renamed package.

(^Min-package \widehat{foo}) ▷ Make package foo current.

{^{Fu}use-package
 unuse-package} $other-packages$ [$package_{\text{var package}}$])
 ▷ Make exported symbols of *other-packages* available in *package*, or remove them from *package*, respectively. Return T.

(^{Fu}package-use-list $package$)
 (^{Fu}package-used-by-list $package$)
 ▷ List of other packages used by/using *package*.

(^{Fu}delete-package $\widehat{package}$)
 ▷ Delete *package*. Return T if successful.

^{var} *package*_{common-lisp-user} ▷ The current package.

(^{Fu}list-all-packages) ▷ List of registered packages.

(^{Fu}package-name $package$) ▷ Name of package.

(^{Fu}package-nicknames $package$) ▷ List of nicknames of *package*.

(^{Fu}find-package $name$)
 ▷ Package object with *name* (case-sensitive).

(^{Fu}find-all-symbols $name$)
 ▷ Return list of symbols with *name* from all registered packages.

{^{Fu}intern
 find-symbol} foo [$package_{\text{var package}}$])
 ▷ Intern or find, respectively, symbol *foo* in *package*. Second return value is one of :internal, :external, or :inherited (or NIL if ^{Fu}intern created a fresh symbol).

(^{Fu}unintern $symbol$ [$package_{\text{var package}}$])
 ▷ Remove *symbol* from *package*, return T on success.

$\left\{ \begin{array}{l} \text{import} \\ \text{shadowing-import} \end{array} \right\}^{\text{Fu}} \text{ symbols } [\text{package} \text{---} \text{var} \text{---} \text{package}^*]$
 ▷ Make *symbols* internal to *package*. Return T. In case of a name conflict signal correctable **package-error** or shadow the old symbol, respectively.

$(\text{shadow symbols } [\text{package} \text{---} \text{var} \text{---} \text{package}^*])$
 ▷ Add *symbols* to shadowing list of *package* making equally named inherited symbols shadowed. Return T.

$(\text{package-shadowing-symbols package})$
 ▷ List of shadowing symbols of *package*.

$(\text{export symbols } [\text{package} \text{---} \text{var} \text{---} \text{package}^*])$
 ▷ Make *symbols* external to *package*. Return T.

$(\text{unexport symbols } [\text{package} \text{---} \text{var} \text{---} \text{package}^*])$
 ▷ Revert *symbols* to internal status. Return T.

$\left\{ \begin{array}{l} \text{do-symbols} \\ \text{do-external-symbols} \\ \text{do-all-symbols} \end{array} \right\}^{\text{M}} (\text{var } [\text{package} \text{---} \text{var} \text{---} \text{package}^*] [\text{result} \text{---} \text{NIL}])$
 $(\text{declare } \widehat{\text{decl}}^*)^* \left\{ \begin{array}{l} \text{tag} \\ \text{form} \end{array} \right\}^*$
 ▷ Evaluate $\widehat{\text{tagbody}}$ -like body with *var* successively bound to every symbol from *package*, to every external symbol from *package*, or to every symbol from all registered packages, respectively. Return values of *result*. Implicitly, the whole form is a **block** named NIL.

$(\text{with-package-iterator } (\text{foo packages } [\text{:internal} | \text{:external} | \text{:inherited}])$
 $(\text{declare } \widehat{\text{decl}}^*)^* \text{ form}^*$
 ▷ Return values of *forms*. In *forms*, successive invocations of (*foo*) return: T if a symbol is returned; a symbol from *packages*; accessibility (**:internal**, **:external**, or **:inherited**); and the package the symbol belongs to.

$(\text{require module } [\text{path-list} \text{---} \text{NIL}])$
 ▷ If not in ***modules***, try paths in *path-list* to load module from. Signal **error** if unsuccessful. Deprecated.

(provide module)
 ▷ If not already there, add *module* to ***modules***. Deprecated.

modules ▷ List of names of loaded modules.

14.3 Symbols

A **symbol** has the attributes *name*, home **package**, property list, and optionally value (of global constant or variable *name*) and function (**function**, macro, or special operator *name*).

$(\text{make-symbol name})$
 ▷ Make fresh, uninterned symbol *name*.

$(\text{gensym } [\text{sg}])$
 ▷ Return fresh, uninterned symbol **#:sn** with *n* from ***gensym-counter***. Increment ***gensym-counter***.

$(\text{gentemp } [\text{prefix} \text{---} \text{NIL}] [\text{package} \text{---} \text{var} \text{---} \text{package}^*])$
 ▷ Intern fresh symbol in *package*. Deprecated.

$(\text{copy-symbol symbol } [\text{props} \text{---} \text{NIL}])$
 ▷ Return uninterned copy of *symbol*. If *props* is T, give copy the same value, function and property list.

$(\text{symbol-name symbol})$

$(\text{symbol-package symbol})$

$(\text{symbol-plist symbol})$

$(\text{symbol-value symbol})$

$(\text{symbol-function symbol})$

▷ Name, package, property list, value, or function, respectively, of *symbol*. **setfable**.

$\left\{ \begin{array}{l} \text{documentation} \\ \text{setf documentation} \end{array} \right\}^{\text{FF}} \text{ new-doc } \text{foo } \{ \text{'variable}' | \text{'function}' | \text{'compiler-macro}' | \text{'method-combination}' | \text{'structure}' | \text{'type}' | \text{'setf T'} \}$
 ▷ Get/set documentation string of *foo* of given type.

t

▷ Truth; the supertype of every type including **t**; the superclass of every class except **t**; ***terminal-io***.

$\text{nil}()$

▷ Falsity; the empty list; the empty type, subtype of every type; ***standard-input***; ***standard-output***; the global environment.

14.4 Standard Packages

common-lisp|cl

▷ Exports the defined names of Common Lisp except for those in the **keyword** package.

common-lisp-user|cl-user

▷ Current package after startup; uses package **common-lisp**.

keyword

▷ Contains symbols which are defined to be of type **keyword**.

15 Compiler

15.1 Predicates

$(\text{special-operator-p foo})$ ▷ T if *foo* is a special operator.

$(\text{compiled-function-p foo})$

▷ T if *foo* is of type **compiled-function**.

15.2 Compilation

$(\text{compile } \left\{ \begin{array}{l} \text{NIL definition} \\ \text{name} \\ \text{setf name} \end{array} \right\} [\text{definition}])$

▷ Return **compiled function** or replace *name*'s function definition with the compiled function. Return T in case of warnings or errors, and T in case of warnings or errors excluding style warnings.

$(\text{compile-file file } \left\{ \begin{array}{l} \text{:output-file } \text{out-path} \\ \text{:verbose } \text{bool} \text{---} \text{var} \text{---} \text{compile-verbose}^* \\ \text{:print } \text{bool} \text{---} \text{var} \text{---} \text{compile-print}^* \\ \text{:external-format } \text{file-format} \text{---} \text{default} \end{array} \right\})$

▷ Write compiled contents of *file* to *out-path*. Return **true** output *path* or **NIL**, T in case of warnings or errors, T in case of warnings or errors excluding style warnings.

$(\text{compile-file-pathname file } [\text{:output-file path}] [\text{other-keyargs}])$

▷ Pathname **compile-file** writes to if invoked with the same arguments.

$(\text{load path } \left\{ \begin{array}{l} \text{:verbose } \text{bool} \text{---} \text{var} \text{---} \text{load-verbose}^* \\ \text{:print } \text{bool} \text{---} \text{var} \text{---} \text{load-print}^* \\ \text{:if-does-not-exist } \text{bool} \text{---} \text{NIL} \\ \text{:external-format } \text{file-format} \text{---} \text{default} \end{array} \right\})$

▷ Load source file or compiled file into Lisp environment. Return T if successful.

compile-file $\left\{ \begin{array}{l} \text{pathname} \text{---} \text{NIL} \\ \text{true-name} \text{---} \text{NIL} \end{array} \right\}^{\text{Fu}}$

▷ Input file used by **compile-file**/by **load**.

compile $\left\{ \begin{array}{l} \text{print}^* \\ \text{verbose}^* \end{array} \right\}^{\text{Fu}}$

▷ Defaults used by **compile-file**/by **load**.

$(\text{eval-when } (\left\{ \begin{array}{l} \text{:compile-toplevel} | \text{compile} \\ \text{:load-toplevel} | \text{load} \\ \text{:execute} | \text{eval} \end{array} \right\}) \text{ form}^*)$

▷ Return values of *forms* if **eval-when** is in the top-level of a file being compiled, in the top-level of a compiled file being loaded, or anywhere, respectively. Return **NIL** if *forms* are not evaluated. (**compile**, **load** and **eval** deprecated.)

^M(untrace {function
(setf function)}*)

▷ Stop functions, or each currently traced function, from being traced.

^{var}*trace-output*

▷ Stream ^Mtrace and ^Mtime print their output on.

^M(step form)

▷ Step through evaluation of form. Return values of form.

^{Fu}(break [control arg*])

▷ Jump directly into debugger; return NIL. See p. 34, ^{Fu}format, for control and args.

^M(time form)

▷ Evaluate forms and print timing information to ^{var}*trace-output*. Return values of form.

^{Fu}(inspect foo)

▷ Interactively give information about foo.

^{Fu}(describe foo [stream ^{var}*standard-output*])

▷ Send information about foo to stream.

^F(describe-object foo [stream])

▷ Send information about foo to stream. Not to be called by user.

^{Fu}(disassemble function)

▷ Send disassembled representation of function to ^{var}*standard-output*. Return NIL.

15.4 Declarations

^{Fu}(proclaim decl)

^M(declaim decl*)

▷ Globally make declaration(s) decl. decl can be: **declaration**, **type**, **ftype**, **inline**, **notinline**, **optimize**, or **special**. See below.

(declare decl*)

▷ Inside certain forms, locally make declarations decl*. decl can be: **dynamic-extent**, **type**, **ftype**, **ignorable**, **ignore**, **inline**, **notinline**, **optimize**, or **special**. See below.

(declaration foo*)

▷ Make foos names of declarations.

(dynamic-extent variable* (^{so}function function)*)

▷ Declare lifetime of variables and/or functions to end when control leaves enclosing block.

([type] type variable*)

(ftype type function*)

▷ Declare variables or functions to be of type.

{ignorable} {var
{ignore} {^{so}function function}}*)

▷ Suppress warnings about used/unused bindings.

(inline function*)

(notinline function*)

▷ Tell compiler to integrate/not to integrate, respectively, called functions into the calling routine.

(optimize {compilation-speed|(compilation-speed n_{\square})
debug|(debug n_{\square})
safety|(safety n_{\square})
space|(space n_{\square})
speed|(speed n_{\square})

▷ Tell compiler how to optimize. $n = 0$ means unimportant, $n = 1$ is neutral, $n = 3$ means important.

(special var*) ▷ Declare vars to be dynamic.

16 External Environment

(^{Fu}get-internal-real-time)

(^{Fu}get-internal-run-time)

▷ Current time, or computing time, respectively, in clock ticks.

(^{co}internal-time-units-per-second)

▷ Number of clock ticks per second.

(^{Fu}encode-universal-time *sec min hour date month year [zone_{current}]*)
(^{Fu}get-universal-time)

▷ Seconds from 1900-01-01, 00:00.

(^{Fu}decode-universal-time *universal-time [time-zone_{current}]*)
(^{Fu}get-decoded-time)

▷ Return second, minute, hour, date, month, year, day, daylight-p, and zone.

(^{Fu}room [{NIL|:default|T}])

▷ Print information about internal storage management.

(^{Fu}short-site-name)

(^{Fu}long-site-name)

▷ String representing physical location of computer.

(^{Fu}lisp-implementation)
(^{Fu}software)
(^{Fu}machine)

▷ Name or version of implementation, operating system, or hardware, respectively.

(^{Fu}machine-instance)

▷ Computer name.
